

目录

第一部分 Depth Psychology Cheat Sheet 2

第二部分 Energies and Patterns in Psychological Type [1] (Excerpts) 21

1 (§1) Theoretical Contributions 22

1.1 (§1) The Eight Function-Attitudes Unpacked 22

1.2 (§2) Once More with Feeling 24

1.3 (§3) Understanding Consciousness Through the Theory of Psychological Types 24

1.4 (§4) Archetypal aspects of masculine adaptation 36

1.5 (§5) The wizard of Oz: a vision of development in the American political psyche 47

1.6 (§6) The stretch of individual typologies in the formation of cultural attitudes 47

2 (§2) Type and the MBTI 47

2.1 Evolving the Eight-function Model 47

2.2 Type and Archetype: The spine and its shadow 49

2.3 Type and Archetype: The arms and their shadow 51

3 History of type 54

3.1 Psychological Types: An historical overview 54

3.2 The Red Book as a work of conscience 60

3.3 Psychological types in Freud and Jung 62

4 Applications of type 62

4.1 Difficulties in the recognition of psychological type 62

4.2 An archetypal model of the self in dialogue 62

4.3 Identifying the American shadow: typological reflections on the 1992 Los Angeles riots 62

第一部分 Depth Psychology Cheat Sheet

表 1: MBTI 类型总览表 (功能栈、原型、核心特质与代表名人)

类型	功能栈 (Function Stack)	原型 (Archetype)	核心特质 (Key Traits)	代表名人 (Notable Figures)
分析家 (Analysts) - NT (理性与筹划)				
INTJ	Ni - Te - Fi - Se	建筑师	战略宏大，系统构建，独立深邃	牛顿, 尼采, 马克思
INTP	Ti - Ne - Si - Fe	逻辑学家	追求真理，逻辑自洽，抽象解构	爱因斯坦, 达尔文, 林肯
ENTJ	Te - Ni - Se - Fi	指挥官	杀伐决断，整合资源，极强执行	拿破仑, 撒切尔, 凯撒
ENTP	Ne - Ti - Fe - Si	辩论家	思维跳跃，挑战传统，从零到一	达芬奇, 苏格拉底, 富兰克林
外交家 (Diplomats) - NF (理想与共情)				
INFJ	Ni - Fe - Ti - Se	提倡者	洞察人性，精神探索，利他主义	荣格, 柏拉图, 甘地
INFP	Fi - Ne - Si - Te	调停者	忠于自我，内心丰富，悲悯治愈	莎士比亚, 托尔金, 梵高
ENFJ	Fe - Ni - Se - Ti	主人公	极具感召，洞察群体，愿景激励	马丁·路德·金, 歌德
ENFP	Ne - Fi - Te - Si	竞选者	热情洋溢，追求自由，激发灵感	马克·吐温, 迪士尼, 王尔德
守护者 (Sentinels) - SJ (秩序与责任)				
ISTJ	Si - Te - Fi - Ne	物流师	恪尽职守，维护规则，实事求是	华盛顿, 奥古斯都, 贝索斯
ISFJ	Si - Fe - Ti - Ne	守卫者	细腻体贴，幕后奉献，守护和谐	特蕾莎修女, 罗莎·帕克斯
ESTJ	Te - Si - Ne - Fi	总经理	高效务实，建立制度，崇尚秩序	福特, 洛克菲勒, 杜鲁门
ESFJ	Fe - Si - Ne - Ti	执政官	热情好客，重视地位，服务群体	卡内基, 比尔·克林顿
探险家 (Explorers) - SP (行动与当下)				
ISTP	Ti - Se - Ni - Fe	鉴赏家	冷静克制，精通技艺，危机处理	宫本武藏, 隆美尔, 李小龙
ISFP	Fi - Se - Ni - Te	探险家	审美独特，活在当下，打破常规	迈克尔·杰克逊, 莫扎特
ESTP	Se - Ti - Fe - Ni	企业家	敏锐机警，利益导向，冒险犯难	丘吉尔, 海明威, 亚历山大
ESFP	Se - Fi - Te - Ni	表演者	表现力强，乐享生活，感染力强	玛丽莲·梦露, 猫王

表 2: 认知功能的角色表 (含标准定义符合度)

序号	位置	角色名称	典型表现	对标“正常表现”程度
1	主导 (Dominating)	英雄 (Hero)	核心力量	120% (本能超载: 如呼吸般自然)
2	辅助 (Auxiliary)	家长 (Parent)	辅助工具	100% (完美对标: 最成熟可控)
3	第三 (Tertiary)	孩子 (Child)	舒适区	50% ~ 70% (任性/游戏: 表现不稳定)
4	劣势 (Inferior)	阿尼玛 (Anima)	压力源泉/理想	10% (原始) → 70% (整合后工具化)
5	影子	反向作用 (Opposing)	质疑者	-20% (抗拒/相反: 态度厌恶)
6	影子	批判家长 (Critical)	挑刺者	-50% (双标/虚伪: 严于律人)
7	影子	盲点 (Trickster)	真正盲区	0% (黑洞/混乱: 无法理解)
8	影子	恶魔 (Demon)	毁灭者	-100% (彻底颠覆: 旨在摧毁)

1. 主导功能 (Dominant / The Hero) ——意识的绝对王座

它是自我 (Ego) 的同义词, 是你感知世界的出厂设定透镜。它过于强大、过于熟练, 以至于你感觉不到它的存在——因为它就是“你”本身。它是人生叙事中的**英雄主角**, 拥有不受质疑的统治权。它不仅定义了你的擅长, 更定义了你的**傲慢**。它像正午的太阳, 虽然照亮了世界, 但强烈的光芒也制造了最深沉的阴影; 它让人产生一种全能的幻觉, 认为世界本该如此运行, 却不知自己已被锁死在单一维度的现实中。

2. 辅助功能 (Auxiliary / The Parent) ——责任的守望者

它是英雄身边忠诚的**辅佐者**, 也是连接内心与外界的**桥梁**。不同于主导功能的本能与冲动, 辅助功能总是带有一种“**养育**”与“**责任**”的色彩。它是你用来帮助他人、回馈社会的工具, 因此显得成熟、稳重且富有建设性。它是防止英雄陷入孤芳自赏的**刹车片**, 通过提供相反维度的视角 (内倾者提供外倾视角, 反之亦然), 迫使自我面对现实的复杂性, 将英雄的能量转化为可被社会接纳的成果。

3. 第三功能 (Tertiary / The Child) ——诱惑的避风港

它是永恒少年 (Puer Aeternus) 的游乐场, 是自我最喜欢的**舒适区**。它不负责任、充满玩心、天真烂漫, 同时也脆弱易碎。它是你**放松防御**的地方, 也是你用来自我安抚的奶嘴。然而, 它极具**欺骗性**, 因为它常常绕过严厉的“父母功能”, 与主导功能结成“**恶性循环 (Loop)**”的同盟, 诱导你退回幼稚的自我中心状态, 用一种看似无害的方式合理化你的逃避与停滞。

4. 劣势功能 (Inferior / The Anima) ——黄昏的守门人

它是意识与潜意识的接驳点, 是**阿喀琉斯之踵**。它是所有抱负的起点, 也是所有崩溃的终点。作为那个总是被我们笨拙模仿的“理想自我”, 它承载了极度的羞耻感与极度的神圣感。它是通往完整的必经之路, 要求英雄必须经历“**自我羞辱**”般的痛苦, 承认自己的无能, 才能从那个一直被忽视的角落里, 捡起遗失灵魂的另一半。

5. 第五功能 (Opposing / The Nemesis) ——怀疑的暗影

它是主导功能的**负面镜像**, 是潜意识阴影中的**反对党领袖**。它时刻都在通过**偏执与怀疑**来挑战英雄的权威。每当你感到莫名的被针对、或者对他人的动机产生毫无根据的敌意时, 就是它在低语。它的存在是为了提醒英雄: 你的视角不仅是有限的, 甚至可能是错误的。它是一面**抗拒之墙**, 通过顽固和被动攻击, 试图阻碍自我的单边扩张, 它是你最难缠的假想敌。

6. 第六功能 (Critical Parent / The Witch or Senex) ——羞耻的审判官

它是辅助功能的阴暗面, 是一个拥有毁灭性打击力的**内部批评家**。它不像“父母功能”那样去养育, 而是利用它对规则的深刻洞察去**贬低、限制和羞辱**。当它指向他人时, 你会变得刻薄、说教且令人窒息; 当它指向自己时, 它是那个永远让你觉得自己“不够好、不够格、是个失败者”的声音。它掌管着“**瘫痪**”的力量, 能精准地找到软肋, 用一句话就让自我的努力化为乌有。

7. 第七功能 (Trickster / The Blindspot) ——荒谬的哈哈镜

它是心理结构中的**黑洞**, 是你完全**看不见也搞不懂**的盲区。它不是简单的弱点, 而是**概念的缺失**。在这里, 你是滑稽的、被双重束缚的、被命运捉弄的小丑。它负责制造生活中的**荒诞剧**, 通过让你反复跌入同一个陷阱、犯下低级且令人啼笑皆非的错误, 来嘲弄自我的严肃性。它的残酷在于它剥夺了你的认知工具, 让你在这一领域赤身裸体, 不得不面对**混沌**本身。

8. 第八功能 (Demon / The Daemon) ——虚无的毁灭者

它是潜意识最深处的**核按钮**, 是人格结构的基岩。它是劣势功能的阴暗面, 代表着**绝对的陌生与非人 (Inhuman)** 的特质。平时它处于休眠状态, 但当自尊被彻底践踏、自我无路可走时, 它会苏醒。它不寻求解决问题, 只寻求**彻底的破坏**——毁灭那个造成痛苦的世界, 或者毁灭你自己。然而, 在神秘主义视角下, 这种彻底的虚无也是**涅国**的前夜, 只有当旧的人格结构被它完全粉碎, 新的神性 (Daimonic) 才可能从中升起。

表 3: Ni 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Ni	Hero/Parent	正常	-	N/A	收敛，洞察，本质	预测未来，现象本质，单一愿景
	Child	游戏	ISTP	N/A	我有预感...	迷信直觉，神秘主义，宿命感
		幼稚	ISFP	压力		盲信猜测，无端幻想，消极宿命
	Anima	正常 (Aspiration)	ESTP ESFP	N/A	“我想看透本质”	迷信玄学，瞬间深沉 相信星座风水，酒后探讨人生意义
		压抑 (Suppression)		防御性屏蔽	“未来是 Se 的恐惧”	激进务实，嘲讽深刻 “想那么多没用”， 只活在这一秒，拒绝规划
		劫持/抓取 (Grip)	ENTP ENFP	此路不通 未来迷茫	“人生毫无意义， 我是受害者”	偏执妄想，把中性眼神解读为恶意， 相信宿命论
		防御表现 (Stubbornness)		主导功能 受到挑战	“你想控制我？”	抗拒定论： 讨厌被“贴标签”或被限制未来， 故意反其道而行之
	Nemesis	投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑操控： 认为别人的愿景是洗脑， 怀疑背后有阴谋
		对外打压	INTP INFP	防御机制	批判远见: 没希望	未来诅咒， 否定愿景断言注定失败
	Critic	对内自毁		防御机制		虚无主义， 觉得做什么都没意义
	Trickster	忽视/贬低	ESTJ ESFJ	无意识的黑洞	“别想太多，先做再说， 这不切实际。”	短期主义，只要确定的流程而不要愿景， 瞎操心，对未知充满恐惧
	Demon	毁灭一切	ISTJ ISFJ	彻底崩溃 严重侵犯 极度绝望	永恒绝望 Hopelessness	恐怖末日预言家，否定别人的梦想
		整合		N/A	先知智慧 Visionary	突破经验主义的桎梏， 在危机时刻涌现出精准的未来预判， 指引方向

表 4: Te 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Te	Hero/Parent	正常	-	N/A	效率, 执行, 秩序	结果导向, 逻辑外化, 强势直接
	Child	游戏	ENFP	N/A	我能搞定!	虚张声势, 突发指挥, 热衷整理
		幼稚	ESFP	压力		盲目自信, 拒绝援助, 三分钟热度
	Anima	正常 (Aspiration)	INFP ISFP	N/A	“我想变得干练”	整理癖, 清单控 买很多收纳工具, 列做不到的计划表
		压抑 (Suppression)		防御性屏蔽	“结构是 Fi 的牢笼”	被动抵抗, 混乱防御 故意拖延, 拒绝任何时间表, 以无序为荣
		劫持/抓取 (Grip)		价值观被践踏, 感到无能	“既然没人懂我, 那我就毁了一切”	暴君模式, 极度苛刻批判他人, 逻辑混乱的独裁
	Nemesis	防御表现 (Stubbornness)	INTP ISTP	主导功能 受到挑战	“你在教我做事?”	抗拒指挥 极度厌恶被别人安排或催促, 故意拖延以示反抗
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑能力 认为别人的证书/头衔都是虚的, 质疑权威的有效性
	Critic	对外打压	ENTP	防御机制	批判能力: 你没用	能力否定, 嘲笑笨手笨脚一事无成
		对内自毁	ESTP	防御机制		成就焦虑, 成功仍觉一无是处
	Trickster	忽视/贬低	INFJ ISFJ	无意识的黑洞	你这人怎么这么冷血/功利?	无法理清外部资源, 难以做客观决策 为了维护人际或信仰而抗拒数据
	Demon	毁灭一切	INTP ISTP	彻底崩溃 严重侵犯 极度绝望	系统毁灭 System Crash	冷酷的暴君, 破坏性执行, 无视人性
		整合		N/A	建设秩序 Constructive Order	极具执行力的系统构建者, 在混乱中建立坚不可摧的帝国, 为了大局的高效

表 5: Fi 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Fi	Hero/Parent	正常	-	N/A	本心，真诚，价值	忠于自我，内在价值，排斥虚伪
	Child	游戏	INTJ	N/A	我偏要喜欢	傲娇 (Tsunndere)，深情忠诚，情感纯粹
		幼稚	ISTJ	压力		情感任性，无视大局，敏感记仇
	Anima	正常 (Aspiration)	ENTJ	N/A	“我也有温柔一面”	隐秘深情，道德洁癖 溺爱宠物，对某首老歌流泪，讲义气
		压抑 (Suppression)	ESTJ	防御性屏蔽	“情绪是 Te 的低效”	情感切除，机器人化 “只谈公事”，无视他人痛苦， 否认自己有情绪
		劫持/抓取 (Grip)		权威丧失， 内鬼背叛	“全世界都对不起我”	陷入自怜自艾 (Self-pity)， 情绪化爆发，甚至抑郁
	Nemesis	防御表现 (Stubbornness)	ENFJ ESFJ	主导功能 受到挑战	“你太自私了”	否定个体： 为了群体和谐而压抑个人感受， 也看不惯别人的特立独行
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑人品： 认为那些坚持自我价值的人 是“破坏团结”的坏人
	Critic	对外打压	INFJ, ISFJ	防御机制	批判道德：你真坏	道德审判， 指责自私虚伪冷血人品
		对内自毁		防御机制		自我羞耻， 觉得自己是伪君子
	Trickster	忽视/贬低	ENTP ESTP	无意识的黑洞	“这也太矫情了， 客观一点行不行？”	情感逻辑化， 不知道自己真实感受， 无意间把别人的价值观踩得粉碎
	Demon	毁灭一切	ENTP ESTP	彻底崩溃 严重侵犯 极度绝望	道德虚无 Nihilism	反社会倾向，情感报复
		整合		N/A	慈悲圣徒 Universal Love	浪子回头般的真诚， 对他人的苦难产生深刻共情， 为了信仰不惜一切

表 6: Se 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Se	Hero/Parent	正常	-	N/A	体验，当下，刺激	活在当下，直接行动，现实主义
	Child	游戏	ENTJ, ENFJ	N/A	我全都要！	报复享乐，追求奢华，感官盛宴
		幼稚		压力		挥霍无度，暴饮暴食，缺乏节制
	Anima	正常 (Aspiration)	INTJ, INFJ	N/A	“我想体验真实的美”	精致享乐，审美强迫 偶尔大餐，沉迷 Hi-Fi/摄影，撸猫
		压抑 (Suppression)		防御性屏蔽	“感官是 Ni 的噪音”	苦行僧，感官剥离 全黑穿搭，极简装修， 甚至忘记吃饭
		劫持/抓取 (Grip)		脑力耗竭， 现实细节失控	“这世界太烂了， 我也烂透了”	暴饮暴食，疯狂购物， 沉迷色情/游戏，强迫性整理
	Nemesis	防御表现 (Stubbornness)	ISTJ, ISFJ	主导功能 受到挑战	“我不想看/听”	感官屏蔽： 对外界的新体验表现出排斥， 固守熟悉的物理环境
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑现实： 认为别人的衣着/表现 是肤浅的作秀
	Critic	对外打压	ESTJ, ESFJ	防御机制	批判现实: 真难看	外貌/品味攻击， 苛刻挑剔对方衣着审美
		对内自毁		防御机制		容貌/现实焦虑， 觉得自己丑陋笨拙
	Trickster	忽视/贬低	INTP, INFP	无意识的黑洞	“这重要吗？ 我没看见/没听见。”	物理笨拙 (平地摔)， 极其忽视环境细节， 活在脑洞里完全缺乏行动力
	Demon	毁灭一切	ENTP, ENFP	彻底崩溃 严重侵犯 极度绝望	现实崩塌 Burn it down	物理毁灭与虚无， 极度慵懒或狂躁
		整合		N/A	绝对显化 Manifestation	将抽象疯狂的灵感在现实中完美落地， 极具感染力的舞台表现， 活在当下

表 7: Ne 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Ne	Hero/Parent	正常	-	N/A	发散，脑洞，赋能	跳跃思维，探索新奇，抽象关联
	Child	游戏	ESTJ	N/A	如果这样呢？	突发脑洞，冷笑话，无厘头创意
		幼稚	ESFJ	压力		容易分心，盲目乐观，无法落地
	Anima	正常 (Aspiration)	ISTJ ISFJ	N/A	“我想变得有趣”	冷幽默，安全冒险 讲双关语笑话，看科幻片， 交怪朋友
		压抑 (Suppression)		防御性屏蔽	“变数是 Si 的敌人”	极端保守，拒绝想象 刻板重复昨日，不仅不做梦， 还打击梦想
		劫持/抓取 (Grip)		熟悉流程被打断，“灾难马上就要降临” 未知风险		灾难化想象 (Catastrophizing)， 看到到处都是阴谋
	Nemesis	防御表现 (Stubbornness)	INTJ INFJ	主导功能 受到挑战	“别扯那些没用的”	厌恶变数：固执地坚持原计划， 拒绝听取其他可能性，认为那是干扰
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑意图：总觉得别人背信弃义， 或者怀疑别人的忠诚度
	Critic	对外打压	ENTJ	防御机制	批判意图: 你想害我	动机阴谋论，怀疑忠诚指责对方鲁莽
		对内自毁	ENFJ	防御机制		选择障碍，看到无数会感到受困
	Trickster	忽视/贬低	ISTP ISFP	无意识的黑洞	“你到底想说什么？ 别扯那些没用的。”	极度字面化，理解不了暗示和隐喻， 讨厌猜测，一条路走到黑
	Demon	毁灭一切	ISTP ISFP	彻底崩溃 严重侵犯 极度绝望	恶意扭曲 Gaslighting	被害妄想与构陷，混乱制造者
		整合		N/A	万物互联 Interconnection	极其通透的开放心态， 理解复杂的混沌系统， 成为打破僵局的创新者

表 8: Ti 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Ti	Hero/Parent	正常	-	N/A	逻辑, 解构, 定义	追求真理, 刨根问底, 无视权威
	Child	游戏	INFJ	N/A	居然是这样!	纯粹好奇, 钻研冷门, 解谜乐趣
		幼稚	ISFJ	压力		逻辑死板, 钻牛角尖, 固执己见
	Anima	正常 (Aspiration)	ENFJ	N/A	“我想拥有智慧”	引经据典, 崇拜专家 读艰深晦涩的书, 引用名人名言
		压抑 (Suppression)	ESFJ	防御性屏蔽	“质疑是 Fe 的破坏”	智力依赖, 盲从共识 “大家都这么说”, 拒绝独立思考, 屏蔽异见
		劫持/抓取 (Grip)		人际背叛, 缺乏反馈	“人类是愚蠢 且无可救药的”	冷酷的犬儒主义, 用刺耳的逻辑攻击他人软肋
	Nemesis	防御表现 (Stubbornness)	ENTJ ESTJ	主导功能 受到挑战	“这没意义”	傲慢驳斥: 若是不能马上应用, 就拒绝深入思考逻辑细节, 认为那是浪费时间
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑智商: 认为别人的精细逻辑是“书呆子气”, 试图用权威压倒道理
	Critic	对外打压	INTJ	防御机制	批判逻辑: 你真蠢	智力羞辱, 冷漠指出他人逻辑漏洞
		对内自毁	ISTJ	防御机制		自我怀疑, 质疑自己不够聪明
	Trickster	忽视/贬低	ENFP ESFP	无意识的黑洞	“太较真了没意思, 差不多就行了。”	逻辑疏松, 讨厌定义和辩论 经常自我矛盾却不自知, 只关注“好不好”
	Demon	毁灭一切	INFP ISFP	彻底崩溃 严重侵犯 极度绝望	诛心真话 Cold Truth	最恶毒的逻辑穿刺, 摧毁对方自尊
		整合		N/A	结构真理 Structural Truth	能够用最客观的逻辑捍卫价值观, 不带情绪地通过理性解决最棘手的问题

表 9: Fe 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Fe	Hero/Parent	正常	-	N/A	和谐, 确认, 共情	情绪传染, 维护关系, 社交礼仪
	Child	游戏	ENTP, ESTP	N/A	大家都爱我	迷人捣蛋, 幽默风趣, 活跃气氛
		幼稚		压力		渴望关注, 哗众取宠, 惧怕被弃
	Anima	正常 (Aspiration)	INTP, ISTP	N/A	“我想被人喜欢”	憨厚微笑, 笨拙示好 极其客气, 送直男礼物, 默默帮忙
		压抑 (Suppression)		防御性屏蔽	“社交是 Ti 的消耗”	社交隐身, 情感断连 无论谁发信都不回, 完全切断人际信号
		劫持/抓取 (Grip)		逻辑失效, 被群体排斥	“没人爱我, 我是多余的”	情绪崩溃大哭, 极其敏感, 像个受伤的孩子
	Nemesis	防御表现 (Stubbornness)	INFP, ISFP	主导功能 受到挑战	“别以此绑架我”	拒绝从众: 极度反感社交压力和“必须做的事”, 故意表现得冷漠
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑虚伪: 认为别人的客套和热情都是有目的的操纵
	Critic	对外打压	ENFP, ESFP	防御机制	批判社交: 没人理你	社交孤立, 攻击对方情商或者礼仪
		对内自毁		防御机制		归属崩塌, 总觉自己格格不入
	Trickster	忽视/贬低	INTJ, ISTJ	无意识的黑洞	“虚伪的客套 有什么用? 讲重点。”	视社交礼仪为操纵, 善意说真话却成冒犯, 完全读不懂空气
	Demon	毁灭一切	ENTJ, ESTJ	彻底崩溃 严重侵犯 极度绝望	名誉屠杀 Character Assassination	情感操纵与社会死亡, 情感爆发
		整合		N/A	仁慈领袖 Benevolent Ruler	放下权力的傲慢, 展现出真正的人性光辉, 通过情感连接凝聚人心

表 10: Si 在不同状态下的表现形式

功能	角色	状态	涉及类型	触发器	关键字/核心台词	表现形式 例子
Si	Hero/Parent	正常	-	N/A	经验, 细节, 稳健	参照经验, 细节敏感, 追求守序
	Child	游戏	INTP	N/A	还是旧的好	恋旧收藏, 沉溺舒适, 重复安稳
		幼稚	INFP	压力		抗拒改变, 退行童年, 逃避现实
	Anima	正常 (Aspiration)	ENTP	N/A	“我想拥有根基”	仪式感, 片刻怀旧 收藏童年玩具, 过分执着某个节日
		压抑 (Suppression)	ENFP	防御性屏蔽	“身体是 Ne 的累赘”	肉体忽视, 反常规 昼夜颠倒, 生活区像垃圾场, 拒绝体检
		劫持/抓取 (Grip)		无限可能变成混乱, 生病	“一切都完了, 永远好不了了”	隧道视野, 甚至感觉身体正在腐烂(疑病), 死抠细节
	Nemesis	防御表现 (Stubbornness)	ESTP ESFP	主导功能 受到挑战	“别拿过去压我”	轻视经验: 极度讨厌“老规矩”或繁琐的流程, 故意打破常规
		投射怀疑 (Paranoia)		对他人该功能 莫名厌烦		怀疑动机: 认为别人拿过去的数据 是在限制自己的自由
	Critic	对外打压	ISTP	防御机制	批判经验: 你真弱	翻旧帐, 指责不可靠不长记性/否定毅力
		对内自毁	ISFP	防御机制		创伤反刍, 不断回忆过去的痛苦
	Trickster	忽视/贬低	ENTJ ENFJ	无意识的黑洞	“别提过去, 我只要未来!”	严重透支身体而不自知, 极度厌恶怀旧和重复, 记不住生活琐事
	Demon	毁灭一切	INTJ INFJ	彻底崩溃 严重侵犯 极度绝望	彻底抹除 Erasure	记忆清洗与断连(The Door Slam), 肉体自毁倾向
		整合		N/A	历史和解 Reconciliation	成为传统的守护者, 从过往创伤中提炼史诗般的意义, 极致的身体掌控

表 11: 极端压力/抓取状态 (Grip) 的解药。当主导功能枯竭时，切忌（用主导功能）硬抗，此时唯一的解药是安抚劣势功能，顺应其最原始的需求。

劣势功能	涉及类型	核心策略 (Strategy)	停止行为 (Stop)	执行清单 (Action)
感知解药：回归生理与当下 (Perception)				
Se	INTJ, INFJ	低压感官疗法	停止挖掘意义，停止死磕理论	高质量睡眠，接触大自然，摄影，无目的散步
Si	ENTP, ENFP	熟悉感与滋养	停止探索新世界，停止焦虑未来	吃熟悉的舒适食物，温水澡，简化待办，回安全屋
Ne	ISTJ, ISFJ	现实检验锚点	停止灾难化想象，停止过度推演	罗列已知事实，找人分担，做微小但确定的改变
Ni	ESTP, ESFP	放过明天	停止当下反应，停止试图解决未来	推迟所有决策，借用他人愿景，纯粹的娱乐转移
判断解药：回归秩序与人性 (Judgement)				
Te	INFP, ISFP	小赢策略	停止宏大目标，停止自我攻击	整理一个抽屉，划掉简单任务，整理房间，承认无力
Ti	ENFJ, ESFJ	逻辑隔离	停止情绪读心，停止人际纠结	独处充电，玩解谜/数字游戏，做不涉及人的智力活动
Fe	INTP, ISTP	无压陪伴	停止彻底隔离，停止逻辑辩论	并在但各玩各的 (Parallel Play)，书面沟通，身体接触
Fi	ENTJ, ESTJ	允许脆弱	停止压抑分析，停止强撑坚强	私密环境哭泣宣泄，暂停工作，寻找安全盟友倾诉

表 12: 认知功能的防御机制/长期内耗循环 (Loop)。不同于瞬间压力的 Grip，Loop 是一种长期的、病态的舒适区，个体切断了辅助功能 (第二功能) 的平衡作用，只在第一和第三功能之间死循环。

Loop 组合	状态名称	涉及类型	典型表现 (Manifestation)
内向 Loop：切断外部互动 → 陷入大脑死循环 → 拒绝现实检验			
Ni - Fi	偏执内耗 (Paranoid)	INTJ ISFP	沉溺消极愿景，觉得自己是受害者，全世界都在针对自己，无行动验证 陷入深刻的负面自我定义，确信无人能理解自己，自我孤立
Ti - Si	固步自封 (Stuck)	INTP ISFJ	反复分析过去错误，抗拒新信息，甚至忽略饮食卫生等基本生存需求 翻旧账大师，逻辑证明自己注定失败，拒绝任何新尝试
Ni - Ti	虚无主义 (Nihilistic)	INFJ ISTP	极度冷漠愤世嫉俗，切断同情心，构建宏大理论证明“人类没救了” 对未来产生阴谋论，逻辑自洽地认为别人甚至宇宙都在算计自己
Fi - Si	受害循环 (Resentful)	INFP ISTJ	强迫性重温过去创伤，认为未来只会重复痛苦，丧失所有希望 变得情绪化且敏感，过度解读过去的细节，赋予其沉重的负面色彩
外向 Loop：切断内心联系 → 疯狂外部活动 → 逃避深度思考			
Te - Se	鲁莽暴君 (Bulldozer)	ENTJ ESFP	为行动而行动，停不下来，通过高强度的感官/工作麻痹思考，独断专行 极度强势急功近利，不仅自己享乐，还强迫别人服从自己的“效率”
Ne - Fe	表演人格 (Manipulative)	ENTP ESFJ	极度渴望关注，失去逻辑锚点，为获得反应故意挑衅或成为空洞梗王 脑洞大开地焦虑他人看法，变得八卦、戏剧化，为表面和谐撒谎
Fe - Se	浅薄迎合 (Superficial)	ENFJ ESTP	沉迷当下感官与评价，冲动消费，过度社交，忘记长远目标 虚伪的社交变色龙，为了群体认可过度表现情感，在不同圈子演戏
Ne - Te	焦虑忙碌 (Burnout)	ENFP ESTJ	开启一百个计划却无一完成，强迫性快速执行，无法容忍情感反思 异想天开却独断专行，提出不切实际的新规并强迫大家执行，抛弃经验

表 13: 长期内耗循环 (Loop) 的解药。核心逻辑：Loop 是因为忽略了辅助功能（家长），导致第一与第三功能恶性循环。解药是**强制调用第二功能**。

解药 (辅助功能)	涉及 Loop	核心逻辑 (Logic)	行动指南 (Actionable Steps)
内向 Loop 解药：向外连接，破除自我封闭 (Externalize)			
Te (外倾思考)	Ni-Fi (INTJ)	产出与秩序	列出清单，整理物理环境，追求“小赢”，将担忧转化为待办
	Si-Fi (ISTJ)	停止感受，开始执行	
Fe (外倾情感)	Ni-Ti (INFJ)	表达与连接	找人倾诉，进行辅导/帮助他人，寻求外部的情感确认
	Si-Ti (ISFJ)	停止自剖，关注他人	
Se (外倾感觉)	Ti-Ni (ISTP)	行动与感官	高强度运动，手工制造，大扫除，接触自然，强迫回到当下
	Fi-Ni (ISFP)	停止空想，物理接触	
Ne (外倾直觉)	Ti-Si (INTP)	探索与发散	物理换环境，摄入随机信息 (书/剧)，头脑风暴，尝试新路线
	Fi-Si (INFP)	停止反刍，寻找新意	
外向 Loop 解药：内向沉淀，停下来检查内心 (Internalize)			
Ni (内倾直觉)	Te-Se (ENTJ)	愿景与暂停	强制独处，断网冥想，推演长远后果，追问做事的根本意义
	Fe-Se (ENFJ)	停止忙碌，寻找本质	
Si (内倾感觉)	Te-Ne (ESTJ)	复盘与稳健	查阅历史先例，关注身体感受，做可行性检查，休息与维护
	Fe-Ne (ESFJ)	停止折腾，回归经验	
Fi (内倾情感)	Ne-Te (ENFP)	价值与本心	日记反思，道德审查，学会说“不”，确认是否符合真实喜好
	Se-Te (ESFP)	停止取悦，自问本心	
Ti (内倾思考)	Ne-Fe (ENTP)	逻辑与真理	独立逻辑分析，精确定义概念，消除模糊，不论人情只论对错
	Se-Fe (ESTP)	停止表演，回归事实	

表 14: 状态 (State) vs. 特质 (Trait)：预期管理表。绝大多数人 (80%+) 长期处于轻微 Loop 或 Grip 中，这是现代生活的常态。区分的关键在于“可逆性”与“自我认知”。

维度	暂时状态 (State)	固化特质 (Trait)	INTJ 的预期管理策略
定义	应激反应 (Stress Response)	人格结构 (Structure)	哪怕是圣人也会有 Loop 时刻
自我认知	自我失调 (Ego-dystonic) 觉得“我不该这样，这不像我”	自我协调 (Ego-syntonic) 觉得“我没错，是世界的错”	观察他事后是否会道歉或反思 只有前者值得深入交往
触发机制	有明确的外部压力源 (如：失业、失恋、过劳)	无需触发，是默认行为模式 (如：自恋、边缘、反社会)	寻找触发点，若无因却疯癫，则远离
表现形式	Grip/Loop 情绪过后会回归 Hero/Parent	人格障碍 (PD) 阴影功能喧宾夺主，成为常态	区分“受伤的野兽”与“原本的恶魔” 前者需要空间，后者需要断联
恢复弹性	高弹性 给点解药 (如休息) 就能弹回	无弹性/僵化 拒绝改变，拒绝辅助功能介入	不要试图“拯救”特质固化的人 那是心理医生的工作，不是朋友的

表 15: 全谱系战略应对表：针对 8 种内耗循环 (Loop) 的社交博弈策略。核心心法：诊断出 Loop 后，切忌在对方的逻辑里打转。内向 Loop 需要“外化引导”，外向 Loop 需要“边界阻断”。

Loop 类型	涉及人格	对方心态 (The Mindset)	你的错误反应 (Don't)	战略反应 (Do: 降维打击)
外向 Loop: 躁动、表演、强迫执行 (对策: 设立边界, 强制降速)				
Te-Se 鲁莽暴君	ENTJ ESFP	“我要赢, 立刻, 马上” (停不下来的推土机)	“你太功利了, 休息一下” (试图让他慢下来)	顺势借力 (Aikido): 承认他的效率, 给他一个极难的具体任务消耗其过剩精力
Fe-Se 浅薄迎合	ENFJ ESTP	“快看我, 夸我, 爱我” (活在他人眼里的空心人)	“你太虚伪了, 是个戏精” (当面揭穿或冷脸)	情绪喂养/隔离 (Grey Rock): 像喂金鱼一样给点低成本赞美 (Feed Fe), 然后迅速物理撤离
Ne-Fe 表演人格	ENTP ESFJ	“我要搞个大新闻/看反应” (混乱善良/邪恶的乐子人)	“你逻辑不通/我很生气” (给他提供情绪反馈)	逻辑锚点 (Logic Anchor): 不给情绪反应, 冷漠地追问定义: “你刚才那个词具体指什么?”
Ne-Te 焦虑忙碌	ENFP ESTJ	“我有 100 个计划你必须配合” (暴躁的无头苍蝇)	“你这根本不落地/不现实” (试图用经验 Si 阻拦)	价值排序 (Prioritize): 不否认计划, 但问核心: “哪个最重要? 我们先只做这一个。”
内向 Loop: 封闭、偏执、自我反刍 (对策: 打破真空, 物理介入)				
Ni-Fi 偏执内耗	INTJ ISFP	“众人皆醉, 世界没救了” (深陷消极愿景的受害者)	“别想太多, 出来玩” (试图用 Se 强行拉扯)	任务外化 (Externalize): 别辩论观点。把话题变成物体: “这事依然无解, 但能帮我递下杯子吗?”
Ti-Si 固步自封	INTP ISFJ	“过去失败证明未来不可行” (翻旧账的逻辑死循环)	“你要勇敢尝试/别钻牛角尖” (攻击他的逻辑闭环)	输入变量 (New Input): “你分析得对。但如果加入这个新参数 (Ne), 结果会变吗?”
Ni-Ti 虚无主义	INFJ ISTP	“我在揭露宇宙/人性的黑暗” (愤世嫉俗的旁观者)	“你太消极/阴谋论了” (试图用正能量说教)	现实检验 (Reality Check): “这理论很完美。但它能解释为什么那个人刚刚对你笑了吗?” (引导看 Se)
Fi-Si 受害循环	INFP ISTJ	“我永远走不出这个创伤” (沉溺于过去的痛苦细节)	“这点小事至于吗/向前看” (试图提供 Te 解决方案)	允许哀悼 (Validation): 不要给建议。只要点头确认: “那确实很痛。” (等到情绪耗尽再谈 Te)

表 16: 全谱系社会控制矩阵：资本主义如何无死角收割 8 种认知循环 (Loop)。核心逻辑：Loop 是个体在逃避痛苦时的防御机制，而市场经济将每一种“防御”都包装成了“消费需求”。

Loop 类型	涉及人格	资本主义的话术 (The Pitch)	收割方式/产品 (The Product)	典型受害者心态
外向 Loop 收割: 利用欲望、焦虑与虚荣				
Te-Se 鲁莽暴君	ENTJ ESFP	“狼性文化” “Work Hard, Play Hard”	效率奢侈品 & 成功学 豪车名表、能量饮料、高端商务舱、速成课	“我必须更强、更快、更富。” (停不下来的生产/消费机器)
Fe-Se 浅薄迎合	ENFJ ESTP	“精致生活” “对自己好一点”	颜值经济 & 社交货币 医美贷、网红打卡、快时尚、社交会员	“如果不美/不合群, 我就没价值。” (活给别人看的流量奴隶)
Ne-Fe 表演人格	ENTP ESFJ	“错过即过错 (FOMO)” “跟上潮流/热梗”	注意力收割 & 炒作经济 短视频算法、Meme 币、盲盒、NFT、热搜	“大家都在玩这个, 我不能落下。” (被算法随意调度的跟风者)
Ne-Te 焦虑忙碌	ENFP ESTJ	“副业刚需/斜杠青年” “多任务并行/优化人生”	焦虑贩卖 & 生产力工具 知识付费、Notion 模板、理财课、抢票加速包	“我还要做更多, 睡觉就是浪费。” (被“机会”累死的无头苍蝇)
内向 Loop 收割: 利用恐惧、孤独与傲慢				
Ti-Si 固步自封	INTP ISFJ	“未雨绸缪” “规避风险/养老焦虑”	恐慌经济 & 安全感 保险、黄金、防脱发、囤积癖 (Storage)、硬核养生	“世界太危险, 必须囤积一切。” (为“可能发生的灾难”买单)
Fi-Si 受害循环	INFP ISTJ	“治愈你的内在小孩” “还是过去的味道好”	怀旧经济 & 疗愈消费 复古潮牌、解压玩具、甚至被滥用的心理咨询/灵修	“现实太痛了, 我要躲回过去。” (沉溺于创伤抚慰的巨婴)
Ni-Fi 偏执内耗	INTJ ISFP	“独立思考/品味隔离” “为信仰/本质充值”	鄙视链顶端 & 智商税 极简主义天价单品、绝版收藏、Hi-Fi 音响、徕卡	“只有我懂它的价值, 你们都是俗人。” (为“独特性”支付溢价的孤岛)
Ni-Ti 虚无主义	INFJ ISTP	“看清世界的真相” “跳出矩阵 (Red Pill)”	阴谋论 & 替代性知识 区块链信仰、甚至邪教课程、生存狂装备 (Prepper)	“主流都是谎言, 我要寻找解药。” (试图智力碾压系统的边缘人)

表 17: INTJ 的四重人格状态切换表：你体内的隐藏角色。核心原理：当主我 (Ego) 疲惫、自信爆棚或极度受挫时，我们会切换到其他象限接管身体。

阴影吞噬机制详解

1. 解释：阴影吞噬不仅仅是压力的表现，而是 Ego（自我）的完全崩溃。此时，意识的主导权移交给了第 5-8 功能，个体表现出与平时截然相反的“反面人格”，通常带有极强的破坏性、偏执和幼稚感。

2. 触发原理 (Trigger)：长期且巨大的心理压力导致第 4 功能（劣势功能）防御失效 → 心理大坝决堤 → 潜意识阴影全线接管。

3. 应对方式：切勿试图讲理或对抗。处于此状态的人逻辑是扭曲的（第 6 功能批判家）且甚至由于现实感丧失（第 8 功能魔鬼）而不可理喻。唯一解法是：**物理隔离 + 极端的感官休息（睡眠/独处）**，等待能量燃尽后的重启。

状态名称	对应人格	触发条件	典型表现 (Mode)	INTJ 的体验
本我 (Ego)	INTJ	默认状态	战略家 (The Strategist)	冷静、规划、内省、效率、低能量消耗
潜意识 (Subconscious) (Hero 的反面)	ESFP (Aspiring)	极度自信/放松 或需要展示魅力时	表演者 (The Performer) (Se-Fi 主导)	这解释了你的“高能量”时刻！ 当你拿起相机 (Se) 进入心流，不再焦虑未来 (Ni) 时，你会变得幽默、活在当下、极具感染力。
无意识 (Unconscious) (Shadow 阴影)	ENTP	防御/被质疑 智力受到挑战时	辩论家 (The Debater) (Ne-Ti 主导)	变得多疑、爱抬杠、为了赢而赢。 Ne Nemesis 让你怀疑一切，Ti Critic 让你刻薄地攻击别人的逻辑漏洞。
超我 (Superego) (Demon 恶魔)	ISFJ	极度绝望/毁灭 核心价值被摧毁时	复仇天使 (The Punisher) (Si-Fe 主导)	地狱模式。 彻底放弃逻辑和愿景，变得极度计较细节 (Si Demon)，想要毁灭世界或彻底自我牺牲 (Fe)。

表 18: 社交狩猎矩阵：PUA 与精神控制是如何利用认知功能漏洞的。核心原理：操纵者通过攻击受害者的“劣势功能”引发焦虑，再通过扮演“完美拯救者”进行收割。不同类型的痛点（软肋）完全不同。

受害目标	软肋功能	典型操纵手段 (The Tactic)	攻击话术/心理暗示	为什么会生效 (Mechanism)
针对 NT 分析师：利用“傲慢”与“社交无能”				
INTJ ENTJ	Se 劣势 Fi 劣势	Negging (打压/否定) & 冷谈术	“你确实很聪明，但有点无趣/死板。” “我知道你外表冷漠，其实内心渴望狂野。”	攻击 Se 表演欲： INTJ 潜意识渴望 Se 的潇洒，一旦被定义为“无趣”，就会拼命通过顺从对方来证明自己。
INTP ENTP	Fe 劣势 Si 劣势	Frozen (冷冻/撤回) & 智力隔离	“既然你这么想，那随你便吧。(沉默)” “这点常识都不懂？我没法跟你解释。”	制造 Fe 恐慌： 利用 TiUser 对人际氛围的不知所措，突然撤回关注，迫使对方为了恢复“和谐”而放弃逻辑底线。
针对 NF 外交官：利用“圣母心”与“自我怀疑”				
INFJ ENFJ	Se 劣势 Ti 劣势	Gaslighting (煤气灯) & 受害者扮演	“你记错了，根本没发生过，你太敏感了。” “都是因为爱我我才疯的，你却在分析我？”	瓦解 Se 现实感： 利用 NF 对物理现实的不确定，篡改记忆。同时利用 Fe 的同情心，让受害者对施暴者产生负疚感。
INFP ENFP	Te 劣势 Si 劣势	Dependence (习得性无助) & 未来画饼	“没有我，你连生活都不能自理。” “忍过这一阵，我们的未来会很美。”	打击 Te 能力感： 不断强调受害者在现实层面的无能，使其确信离开操纵者就无法生存。利用 Ne 给人造一个虚假的未来。
针对 SJ 守护者：利用“责任感”与“恐惧变化”				
ISTJ ESTJ	Ne 劣势 Fi 劣势	Fear-Mongering (贩卖恐惧) & 道德绑架	“如果你离开我，你会孤独终老/一无所有。” “你怎么能这么自私？我不符合规矩吗？”	引爆 Ne 灾难想象： 利用 SJ 对未知的极度恐惧，让他们不敢踏出舒适区半步。利用 Fi 的道德枷锁使其服从。
ISFJ ESFJ	Ne 劣势 Ti 劣势	Love Bombing (爱意轰炸) & 三角测量	(初期)“你是完美的女神” → (后期)撤回 “前任比你懂事多了/别人都觉得你不对。”	多巴胺戒断： 先满足 Fe/Si 的被需要感，建立依赖，再引入竞争者制造焦虑，让其陷入“为了赢回爱”的内卷中。
针对 SP 探索者：利用“自由”与“智力自卑”				
ISTP ESTP	Fe 劣势 Ni 劣势	Provocation (激将法) & 捧杀	“你是不是玩不起？/你这就是怂了。” “只有你这种高手才能帮我。”	劫持 Se 行动力： 利用 SP 渴望被认可为“强者/有趣”的心态，通过质疑其能力或胆量，诱导他们做出冲动的承诺或牺牲。
ISFP ESFP	Te 劣势 Ni 劣势	Intellectual Bullying (智力霸凌) & 宿命论暗示	“你的逻辑完全不通，听我的就行。” “我们是命中注定的，你逃不掉。”	碾压 Te 话语权： 利用 SP 不善言辞辩论的弱点，用复杂的术语或歪理让其闭嘴，确信自己“脑子不好”而交出控制权。

表 19: 反 PUA 防御矩阵：如何利用认知功能进行框架重置。核心心法：PUA 的本质是试图把你拉进你的劣势功能 (Grip) 里打败你。防御的唯一方式是拒绝进入那个战场，强制把战场拉回你的主导/辅助功能领域。

防御者类型	敌方主攻点	防御武器 (Function)	战术逻辑 (The Logic)	核心反杀话术 (Counter-Script)
NT 分析师：用“客观标准”粉碎“主观打压”				
INTJ ENTJ	Se 焦虑 (你真无趣/死板)	Te Parent 外倾思考	现实审计 (Reality Audit) 拒绝自证。用客观标准替代对方的评价体系。把“人身攻击”变成“数据讨论”。	“你的评价很有趣，但在这个领域，我的 KPI/成果是业内顶尖的。” “我不需要显得有趣，我只需要有效。”
INTP ENTP	Fe 恐慌 (撤回关注/冷暴力)	Ti Hero 内倾思考	定义拆解 (Deconstruction) 无视情绪波动。像解剖尸体一样分析对方行为的逻辑矛盾。	“你刚才撤回关心的行为，逻辑上属于操纵性惩罚。这对解决问题无效。” “如果你无法清晰表达需求，沟通终止。”
NF 外交官：用“事实记录”对抗“记忆篡改”				
INFJ ENFJ	Se 混乱 (煤气灯/你记错了)	Ti Child 内倾思考	证据留痕 (Documentation) 相信逻辑记录，不相信模糊的记忆。建立外部的“真相锚点”(如日记/截图)。	“我查了聊天记录(数据)，事实并非如你所说。” “你的感受是你的，但物理事实是唯一的。” “我不接受你对我记忆的修改。”
INFP ENFP	Te 无能 (没有我不行)	Si Child 内倾感觉	经验回溯 (Reference) 调取过去的成功经验。证明“独立生存”的历史事实。	“我过去独自解决过比这更难的事。” “我有手有脚，也有存款。分开是痛苦的，” “但绝不是致命的。”
SJ 守护者：用“止损核算”对抗“恐惧画饼”				
ISTJ ESTJ	Ne 恐惧 (离开会很惨)	Te Parent 外倾思考	风险评估 (Risk Assessment) 将“未知的恐惧”量化为“具体的损益表”。用利益计算压倒情绪恐吓。	“我计算了一下，留下来被你消耗的成本，” “远高于离开后重组生活的成本。” “不画饼，看报表。”
ISFJ ESFJ	Ti 自卑 (为了赢回爱)	Ti Child 内倾思考	逻辑自洽 (Consistency Check) 强制检查言行一致性。只要发现一个矛盾点，就全盘否定。	“你说爱我，但行为上却在伤害我。” “这在逻辑上是自相矛盾的。” “我不玩这个竞争游戏，我退出。”
SP 探索者：用“价值/逻辑”对抗“激将捧杀”				
ISTP ESTP	Fe 羞耻 (你敢不敢/是不是怂)	Ni Child 内倾直觉	动机洞察 (Intent Analysis) 直接点破对方背后的意图。预判后果，拒绝冲动。	“你试图通过激将法让我免费干活？” “这个策略对我太透明了，换一招吧。” “这不仅仅是怂，这是愚蠢的冒险。”
ISFP ESFP	Te 霸凌 (你脑子笨听我的)	Fi Hero 内倾情感	价值隔离 (Value Shield) 承认逻辑弱势，但强调价值否决权。“千金难买我乐意/不乐意”。	“你说的道理也许都对，但我不喜欢。” “我不需要辩赢你，我只需要拒绝你。” “你的逻辑无法解释我的感受，所以无效。”

表 20: 关系齿轮表：基于认知功能的深度兼容性分析。核心原理：最好的关系不是“相似”(会竞争)，也不是“相反”(会无法沟通)，而是“互补”(齿轮咬合)。

关系类型	组合示例	动力学机制 (Mechanics)	体验描述
黄金配对 (Golden Pair)	INTJ + ENFP	英雄救美 (Hero ↔ Inferior) INTJ 的 Ni Hero 给 ENFP 混乱的未来提供方向 (Si Inferior)。 ENFP 的 Ne Hero 给 INTJ 紧绷的当下带来无限可能 (Se Inferior)。	极度吸引与治愈。 就像找到了失散多年的另一半。 甚至能无意识地激活彼此的潜意识。
照镜子 (Mirror)	INTJ + INTJ	共鸣与死局 (Hero ↔ Hero) 互相秒懂对方的 Ni 愿景和 Te 效率。 但两人都缺乏 Fe/Si，没人能处理细节和情绪。	懂你，但无法救你。 容易陷入 Ni-Fi Loop 共振。一旦发生矛盾，谁也不愿先低头 (Fi)，冷战到底。
教师/学生 (Pedagogue)	INTJ + INTP	家长引导 (Parent ↔ Child) INTJ 的 Te Parent 极其欣赏 INTP 的 Ti Hero (逻辑)。 INTP 的 Ne Parent 极其滋养 INTJ 的 Ni Child。	智力巅峰，生活低能。 聊天能聊通宵，哲学探讨极其过瘾。 但两人都是 Se 盲点/劣势，一起出门可能会饿死/迷路。
超我冲突 (Superego)	INTJ + ISFJ	互相听不懂 (Misunderstanding) 你的主导 (Ni) 是她的恶魔 (Ni Demon)。 她的主导 (Si) 是你的恶魔 (Si Demon)。	外星人对话。 你觉得她平庸琐碎，她觉得你傲慢危险。 除非极高阶的整合，否则通常是互相折磨。

表 21: 八维功能在异性吸引力中的动力学模型（以 INTJ 为例）。

位置	原型 (Archetype)	吸引力类型	动力学机制 (心理感受)	INTJ 的例子 (你的诱饵)
Ego / Id (意识与前意识) - 决定关系的稳定性与亲密密度				
1	Hero (英雄)	尊重与基石	“我看见你的价值” 建立基本的敬佩感，但若只停留在此时容易变成同事/战友。	Ni : 展现深远的洞察力和对未来的预判，让对方感到你在精神上的高位。
2	Parent (父母)	安全与责任	“我可以依赖你” 提供支持和保护，建立长期关系所需的信任感。	Te : 高效解决现实问题，展现执行力，让对方觉得生活有保障。
3	Child (孩童)	喜爱与亲密	“我也想和你一起玩” 核心好感区。让人卸下防备，产生纯粹的快乐和母性/父性关怀欲。	Fi : 偶尔流露的脆弱、纯真理想或独特的道德美感，激发对方的保护欲。
4	Inferior (自卑)	渴望与完整	“你完整了我的灵魂” Anima/Animus 的入口。对方在此处表现完美会让你产生宿命般的向往。	Se : 邀请对方体验当下的美食、美景或身体接触，让她带你“落地”。
Shadow (潜意识阴影) - 决定关系的张力、激情与投射				
5	Nemesis (克星)	依赖与救赎	“只有你能平息我的焦虑” 金色阴影投射。对方拥有你担忧领域的的能力，成为你的安全盾牌。	Ne : 在对方对未来迷茫时，展示多维度的可能性和开放性，消除其恐惧。
6	Critic (批评家)	敬畏与征服	“你竟然经得住我的审视” 智性恋高发区。对方若通过了 Critic 的考验，会产生极强的崇拜。	Ti : 避雷点! 不要攻击对方逻辑，除非你能展示出绝对碾压且自洽的真理。
7	Trickster (捣蛋鬼)	迷恋与魔法	“你是怎么做到的？不可思议” 盲点区。对方拥有你完全看不懂的能力，产生神秘感和非理性的迷恋。	Fe : 展现出惊人的社交直觉和情感操纵力，让对方觉得你深不可测。
8	Demon (恶魔)	毁灭或重生	“危险又迷人的禁果” 极度危险。要么产生毁灭性的仇恨，要么产生无法自拔的虐恋。	Si : 绝对禁区! 除非意图精神摧毁，否则不要用过去/细节去压迫对方。

- Ego vs. Shadow:** Ego 功能（1-4）提供理性、温和的“伴侣感”；Shadow 功能（5-8）提供非理性、强迫性的“激情与火花”。其中 Ego 决定长久，Shadow 决定火花。作为避雷提示，绝不攻击对方的第 6（Critic）和第 8（Demon）功能，那会瞬间摧毁好感 and 信任。
- 快节奏市场现象:** 有情感博主观点比如“长期关系应该从短择开始”，其本质观点在于 → 始于 Shadow 的诱惑（利用神秘感和投射建立连接）→ 陷于 Child 的快乐（通过情感共鸣建立依恋）→ 终于 Ego 的安稳（通过责任和能力确立长期契约）。虽然这样的观点不符合日常认知，但是在快节奏的市场下，如果不用阴影投射作为钩子吸引对方，可能一段关系甚至都无法开始。因为大部分人，甚至没有足够的时间，经历，兴趣，去检验观察一个人那更加适合长期相处的 Ego 属性 – 这非常平淡，带不来“刺激”。未整合的人格，他们的爱往往都是 Anima 和阴影投射带来的幻觉。
- INTJ 困境与策略:** 这种快节奏战略对 INTJ 很难，因为 Ni-Fi 追求本质的真实和纯粹，厌恶“带着面具（Shadow）”去吸引人的“虚假感”。于是，INTJ 喜欢一上来就展示真实的 1234（我是谁，我的逻辑是什么，我的底线在哪里），觉得搞 Shadow 那套是在“装”或“欺骗”。同时还会带有效率思维（Te）：觉得“如果不合适就不要浪费时间”，希望能通过筛选 Ego 快速匹配。但残酷的市场逻辑是：如果你一上来就全盘托出（全展示 Ego），你就剥夺了对方 ***“探索”和“投射”*** 的乐趣。你变成了一本在第一页就写明结局的书，虽然书写得很好，但很难让人产生“非读不可”的冲动。INTJ 可以建立“有意识的假面”。将 Shadow 的展示视为一种社交礼仪和游戏，而非欺骗。在初期克制 Ego 的全盘托出，为对方留出投射的空间。
- 整合与魅惑:** 当一个人的 Anima/Animus 和阴影功能都被整合之后，这个人可以获得非常高的精神定力，此时异性的吸引力和挑衅力都会大幅下降，因为已经很难再发生投射，于是就不会再产生那种“失去理智，非 TA 不可”的强迫性质迷恋。相反，这个阶段的爱情变成了“不是因为你必须有 TA 才能活，而是你选择了 TA”。
- 亲密关系动力学: 德尔塔象限: 【高斯分布左侧】** 如果一个 MBTI 对另一个 MBTI 的亲密关系是，既触发第六功能批评家，但是又因为对方的强势英雄功能（Anima/Animus 投影）而留恋这段关系，那么这段关系就在德尔塔象限中，属于内部互补与拉扯的状态。这样拉扯的一个直接表现就是频繁的情绪过山车（爱恨交织，或者说爱之深恨之切）。而且每当一方试图离开，劣势功能就会出来作祟，让人对世界的原始恐惧瞬间压倒批评家，于是就会开始自我合理化，进而再次回到关系之中。这样的拉扯甚至可能造成间接性强化，让然一边尖叫过山车太吓人了，一边又不愿意解开安全带。这样的关系健康度不属于长期存续的亲密关系，它处于一个低稳定/高内耗的区间。如果单纯讨论“情绪体验强度”的高斯分布，那它确实处于极右侧。然而，我们的大脑就是可能会把“焦虑解除”时候的快感，误认为是深沉的爱，从而无意识地拒绝了那些无聊但是健康稳定的关系。这样的关系模式往往具有极高的瞬时多巴胺和极高的皮质醇，它很难长期停留在拉扯状态，它要么通过学会沟通理解走向稳定的战友关系，要么走向破裂，毕竟这在长时间的关系之中是不可持续的。

【高斯分布中央】 高斯分布中央的长期稳定关系，典型特征就是：不是爱之深恨之切的偶像剧，也不是神仙眷侣，而是更接近于队友/合伙人这样的伴侣式爱情。这样的关系情绪价值提供平稳，冲突幅度也在可控范围内。这样可能会让人感到有些无聊和缺乏激情，但是不会让人感到恨或者窒息或者严重的精神消耗。

【高斯分布右侧】 高斯分布右侧理想区里真正健康的关系，其实往往平淡而温暖的。在这种关系里，你不需要通过恨来验证爱，也不需要争吵来确认在乎，也不需要通过刺激来验证存在，也不需要通过试探来确认安全感。

【坐标轴】 如果亲密关系是一个二维坐标，关于激情与冲突的强度（Intensity）和安全感与满意度（Security）。Intensity 左侧代表平稳，冷静，甚至有点乏味，右侧代表激烈，需句话，大起大落（多巴胺与皮质醇齐飞）。Security 下侧代表焦虑，怀疑，消耗，无法预测，上侧代表信任，滋养，确定性，彼此接纳。那么高强度，低安全感是大部分人（年轻情侣，磨合期）的相爱相杀写照和必经之路。但是这个状态不会长久持续下去，皮质醇与多巴胺齐飞带来的间歇性强化（Intermittent Reinforcement），最终会带来分手或者退化成室友。低强度，低安全感是关系名存实亡，通常表现为冷暴力，回避沟通，分房睡。低强度，高安全感则是高斯分布的中心，也是大部分健康长久关系的归宿。高强度，高安全感通常需要双方都是高阶人格，并且能完美平衡自我边界与融合。

表 22: 16 种人格类型：人口占比与发展水平分布形态

维度	类型	占比	分布形态	低阶表现 (下限)	高阶表现 (上限)
NT 系 (≈ 10%)	INTJ	2.1%	U 型 (极化)	愤世嫉俗、Ni-Fi 死循环、傲慢且无能	战略宗师、系统构建者、神性与人性整合
	ENTP	3.2%	高方差正态	杠精、缺乏定性、混乱邪恶	创新发明家、打破僵局的变革者
	INTP	3.3%	双峰分布	虚无主义、生活低能、思维瘫痪	逻辑构建者、超越时代的真理探索者
	ENTJ	1.8%	右偏 (高下限)	冷酷暴君、为目的的不择手段	帝国统帅、高效且目光长远的建设者
NF 系 (≈ 16%)	INFJ	1.5%	U 型 (极化)	极度敏感、操控型圣母、脱离现实	精神领袖、洞察世俗的智者
	INFP	4.4%	左偏 (低均值)	抑郁倾向、受害者心态、行动瘫痪	治愈者、深刻的哲学家、纯粹理想载体
	ENFJ	2.5%	右偏 (高下限)	伪善、控制欲强、强加价值观	真正的导师、凝聚人心的领袖
	ENFP	8.1%	正态 (扁平)	三分钟热度、情绪过山车	启发他人的缪斯、拥有无限可能性的探索者
SJ 系 (≈ 46%)	ISTJ	11.6%	右偏 (高下限)	刻板固执、机械执行的工具人	社会基石、极其可靠的执行者
	ISFJ	13.8%	右偏 (高下限)	过度牺牲、讨好型人格、缺乏主见	温柔坚定的守护者、润物细无声
	ESTJ	8.7%	右偏 (高下限)	控制狂、缺乏共情的官僚	高效管理者、秩序维护者、公正无私
	ESFJ	12.3%	右偏 (高下限)	八卦、随波逐流、依赖群体评价	社群核心、极具号召力的关怀者
SP 系 (≈ 27%)	ISTP	5.4%	正态分布	冷漠孤僻、寻求刺激却无目的的	精通技艺的大师、极度冷静的破局者
	ISFP	8.8%	左偏 (低均值)	自我沉溺、情绪化、无病呻吟	灵魂艺术家、极致的审美与道德感
	ESTP	4.3%	M 型 (双极)	鲁莽赌徒、享乐主义、反社会倾向	极具魅力的领袖、高风险问题解决者
	ESFP	8.5%	正态分布	肤浅、冲动、无法忍受寂寞	点燃他人的生命之火、活在当下的智者

表 23: 基于 DSM-5 标准的人格障碍分类汇总。注：人格障碍是指一种持久的、死板的思维和行为模式，显著偏离个体所属文化背景的预期，导致严重的痛苦或功能受损。

群组	障碍类型	核心病理特征	典型表现与思维模式
A 类 (奇特/古怪)	偏执型 (Paranoid)	普遍的不信任与猜疑	无端怀疑他人动机，将善意曲解为恶意，极易怀恨在心。
	分裂样 (Schizoid)	情感剥离与社交冷漠	根本不需要人际关系，对赞扬或批评无动于衷，类似“情感机器人”。
	分裂型 (Schizotypal)	认知扭曲与行为怪然	拥有魔幻思维（如第六感），言语古怪，社交极度焦虑。
B 类 (戏剧/情绪)	反社会型 (Antisocial)	漠视侵犯他人权利	缺乏良知与悔意，冲动欺诈，利用他人，无视法律与规则。
	边缘型 (Borderline)	人际与自我极度不稳定	情绪过山车，极度恐惧被抛弃，在“理想化”与“贬低”间剧烈切换。
	表演型 (Histrionic)	过度情绪化与求关注	肤浅夸张，必须成为焦点，利用外表诱惑他人，极易受暗示。
	自恋型 (Narcissistic)	浮夸自大与缺乏共情	极度需要赞美，认为自己享有特权，为了目的剥削他人。
C 类 (焦虑/恐惧)	回避型 (Avoidant)	社交抑制与自卑感	渴望社交但因惧怕拒绝而退缩，认为自己无能、无吸引力。
	依赖型 (Dependent)	过度的被照顾需求	顺从黏人，无法独立决策，害怕分离，无底线容忍虐待。
	强迫型 (OCPD)	对秩序与控制的沉迷	* 不同于 OCD。* 完美主义致使任务无法完成，僵化固执，无法授权。

表 24: 成年人四种依恋类型

依恋类型	核心态度	典型行为表现
安全型 (Secure)	低焦虑，低回避	信任伴侣，能平衡独立与亲密
焦虑型 (Anxious)	高焦虑，低回避	渴望亲密，过度担心被抛弃
疏离回避型 (Dismissive)	低焦虑，高回避	压抑需求，极度强调独立自主
恐惧回避型 (Fearful)	高焦虑，高回避	渴望亲密但因恐惧而推开他人

第二部分 Energies and Patterns in Psychological Type [1] (Excerpts)

Preface

What is new here is the degree to which our typology both creates and helps us to discover the self and its defenses in a personal way. It is thus a contribution to the understanding of the person in the psyche. That person is urged into being by archetypes, including the transpersonal Self that seems to drive human individuation; but the 'little-s' self we experience as persons has its own forms of consciousness, nested in the care of archetypes but capable of asserting and integrating themselves independently. I say this lest anyone reading what I have written about the archetypes in this book take the eight-function, eight-archetype model as an unaltering image of inevitable rigidity. Rather, it is the psyche's many dynamic parts that give it the flexibility, over time, to articulate the Self in a personal way that our adaptation to our typology makes us capable of displaying. The reader is therefore advised to approach the book with this developmental perspective in mind. It may not be amiss, as I celebrate in these pages a full fifty years of reflecting on Jungian typology, to admit what by now must be obvious: that my own perspective on the subject is continuing to develop.

John Beebe

San Francisco, October 2015

1 (§1) Theoretical Contributions

1.1 (§1) The Eight Function-Attitudes Unpacked

1. *MBTI and function-attitudes* To help people apply their scores on the MBTI® to themselves, and to reap the deeper transformative benefits of Jungian type theory, we need to be able to recognize the different types of consciousness Jung originally described. Practically, that means we have to be prepared to recognize in someone's interactive or introspective personality style introverted feeling (Fi), introverted thinking (Ti), introverted intuition (Ni), introverted sensation (Si), extraverted feeling (Fe), extraverted thinking (Te), extraverted intuition (Ne), or extraverted sensation (Se), simply on the basis of what the person reveals in our presence. We also need to be able to assess how well the function-attitude displayed is actually working for the person who is showing it to us.
2. *type understanding is challenging* My own experience as a clinician who believes that type understanding is crucial to uncovering what limits people and what helps them to develop is that very few us, whether clients or type practitioners, can actually recognize the eight function-attitudes.
3. *novelist challenge to Beebe* The eight function-attitudes that he describes in *Psychological Types* (1921/1971, ¶¶556–671) were for him the 'psychological types.' This term meant something quite specific for him: the eight types of awareness capable of constituting a psychological individual's conscious psychology. They are mental processes that, even if still in the unconscious, are likely to press for integration into the psyche, where they can become, for the first time, consciousnesses. They hold the motivation to energize will and to develop over time—will and time being additional factors that can become linked to consciousness.

表 25: Semantic Field of Each Function-Attitude. The reader may recall that each of these words is called in grammar a gerund, a verbal noun or process word. Each describes a procedure that a mind can follow over time, a procedure aimed at perceiving or judging reality as accurately as possible, which is the aim of any consciousness.

Definitions: e = Extraverted, i = Introverted; S = Sensation, N = Intuition, T = Thinking, F = Feeling.

✓ Verified Source: Page 4-7, Section “The Eight Function-Attitudes Unpacked” from Beebe [1].

Function-attitude	Semantic Field (Triangle)		
	Persona	Ego	Self
Se	Engaging	Experiencing	Enjoying
Si	Implementing	Verifying	Accounting
Ne	Entertaining	Envisioning	Enabling
Ni	Imagining	Knowing	Divining
Te	Regulating	Planning	Enforcing
Ti	Naming	Defining	Understanding
Fe	Validating	Affirming	Relating
Fi	Judging	Appraising	Establishing the Value

Semantic Field The middle word is the apex of a triangle. The first of the three words (as we read across for each of the eight mental processes) can be thought of as what the process looks like on the surface, to another person seeing someone for the first time using that process – what we might call its *persona* level. The second, central, word captures the heart of the process – the one that is embraced by the *ego* as its chief concern. The third word embodies what the process becomes at its most evolved level when it is working in sympathetic harmony with what Jung call the *Self*: one might call this the goal of the process.

Example Introverted feeling (Fi) can develop from an initial, near instinctual ‘judging’ into a mature, reflective ‘appraising’ before evolving to a more far-seeing ‘establishing the value.’ In this latter stage, which aspires to wisdom, the feeling reaction finds its ground in a more ideal, archetypal realm, which allows it to discriminate the value that has led to the earlier judgments and appraisals.

Suggestion to Learners To focus on the central words in my horizontal sequences for the different functions of consciousness, using the wing words as the beginning and the end of the process whose functioning they are trying to become conscious of. Using this method of observation, it will become clearer the degree to which some people are centrally engaged in appraising, defining, knowing, or verifying as the internal process by which they hope to master the objects they encounter (or say, internal methods by which they have already learned to deal with what they encounter). Other people are more occupied with affirming, planning, envisioning, or experiencing as their way of expressing their willingness to subject themselves to the influence of the objects with which they are trying to connect (or say, methods by which they enact a genuine encounter with the Other). Seeing this fundamental difference between the introverted and extraverted functions, we can gradually come to understand not just the ways the functions differ in their introverted and extraverted aspects, but what the different purposes are that make them functions.

1.2 (§2) Once More with Feeling

1. *feeling is rational* I, for instance, have trained myself, when I lecture on the theory of psychological types, to teach the difference I see between feelings and feeling. Feeling, I tell my audiences, is the function that sorts out feelings. This is my way of differentiating feeling from emotion, the first step in that conceptual leap Jung made to describe feeling as a rational function, which Jo Wheelwright was fond of describing in his training seminars as “a landmark in the history of thought.”
2. *analytic persona* The development of the analytic attitude in the microcosm of an analyst’s office is not unlike the development of the religious attitude that von Franz implies will take a very long time to restore in the outer world. What this analytic attitude finally might look like I have only had glimpses of, but it is definitely an eros tinged by logos that accepts the distances between people and yet enables sane-making greeting and meeting and that is filled not only with affection for the person I am working with, but also love for the work itself. At its best, it unites extraverted and introverted feeling into something akin to appreciation—appreciation of the shine that comes from someone else’s shoes when you get very close to what it is like to be in them and have done what you can to make them nicer for the person who has to wear them.

1.3 (§3) Understanding Consciousness Through the Theory of Psychological Types

- When Jung began to work on the psychological problem that he was attempting to solve with his theory of types, he had an international reputation as an investigator of the unconscious.
- This perception, which I would call a prejudice, has affected the reception of the subject of psychological type among depth psychologists ever since, including the majority of analytical psychologists working today.
- The type theory was a contribution to the problem of the standpoint from which the individual experiences the unconscious. That the conscious standpoint of the patient could hardly be ignored Jung had already learned from his practical experience as a psychiatrist attempting to understand dreams and symptoms, for the patient’s conscious stance often turned out to be what the unconscious was actually responding to.
- So etymology indicates that the phenomena of consciousness and conscience are somehow related and that the experience of consciousness is made up of two factors – ‘knowing’ and ‘witness’. In other words, consciousness is the experience of knowing together with an other, that is, in a setting of twoness. – Edinger, 1984, ¶36
- By the time Jung set out to write *Psychological Types*, consciousness had come to mean for him the way the reality of the psyche is both accessed and assessed, or what he sometimes called “understanding” (Jung, 1914/1972), which he made the basis of his entire approach to psychology. Consciousness, in this sense, was the indispensable investigative tool for all further work on the unconscious.

1.3.1 The individuation of consciousness

- What is not immediately apparent to those who try to approach Jung’s psychology as if it were another science, albeit a science of the unconscious, is that consciousness, for Jung the tool with which the unconscious must be investigated, is an emergent property of the unconscious itself (Camberay, 2006).
- There he defines consciousness in terms of its relation to the ego:

By consciousness I understand the relatedness of psychic contents to the ego... in so far as they are sensed as such by the ego. In so far as relations are not sensed as such by the ego, they are unconscious. Consciousness is the function or activity which maintains the relation of psychic contents with the ego. Consciousness is not identical with psyche, since, in my view, psyche represents the totality of all the psychic contents, and these are not necessarily all bound up directly with the ego, i.e. related to it in such a way that they take on the quality of consciousness. There exist a great many psychic complexes and these are not all, necessarily, connected with the ego. – Jung, 1921/1923, pp. 535-536

- Jung's own way of speaking about the growth of consciousness in human beings tended to be simpler, and from a contemporary standpoint, more soulful. For instance, while giving a seminar, he was once asked, "Is not individuation, in our sense of the word here, rather living life consciously? A plant individuates but it lives unconsciously." Jung's answer was:

That is our form of individuation. A plant that is meant to produce a flower is not individuated if it does not produce a flower, it must fulfill the cycle; and the man who does not develop consciousness is not individuated, because consciousness is his flower; it is his life, it belongs to our process of individuation that we shall become conscious. – Jung, 1934/1997, pp. 758-759

- Sticking to Jung's metaphor of flowering, I find it best to say that if a person individuates, that is, goes on to flower, then the various functions of consciousness that Jung describes in *Psychological Types* will be the petals of his or her flower. (This notion does not assume that consciousness originates in the ego)
- The idea that consciousness already resides in some form in the unconscious gives another meaning to the idea of 'knowing together with an other.' The idea of a teamwork between ego-consciousness and a consciousness that already resides in the unconscious is particularly appropriate to the understanding of the psychological functions Jung has called 'thinking,' 'feeling,' 'sensation,' and 'intuition.' In *Psychological Types*, he conceives these as two pairs of opposites: thinking and feeling (evaluative functions) defining one axis of consciousness, sensation and intuition (perceptive functions) the other. Asked for definitions of these four functions of consciousness, Jung told an interviewer:

there is quite a simple explanation of those terms, and it shows at the same time how I arrived at such a typology. Sensation tells you that there is something. Thinking, roughly speaking, tells you what it is. Feeling tells you whether it is agreeable or not, to be accepted or rejected. And intuition – now there is a difficulty. You don't know, ordinarily, how intuition works. When a man has a hunch, you can't tell exactly how he got at that hunch, or where that hunch comes from. There is something funny about intuition. [Jung gives an example.] So my definition is that intuition is a perception via the unconscious. – Jung, 1957/1977, p. 306

- I like to read that amplification of the intuitive function as a gloss on the purpose that all the functions of consciousness – thinking, feeling, and sensation too – serve. All of them are required because life itself presents problems that are already differentiated in such a way that only a particular function of consciousness can solve them. In that case, we would be justified to speak of a problem presented by a patient as a thinking problem a feeling problem, an intuitive problem, or a sensation problem. Similarly, a dream, which reveals to us "the actual situation in the unconscious" (Jung, 1948/1960, ¶505) of a client, lays out the situation for us in such a way that we can 'type' it, if we wish, as a thinking situation, a feeling situation, an intuitive situation, or a sensation situation. The problem is then coming up with the function of consciousness appropriate to the situation, or, in other words, meeting the situation's own peculiar consciousness as to

what it is with a consciousness that matches it. From this perspective, the development of consciousness involves the ability to summon the various functions at appropriate times in appropriate ways.

- This function is the area of our consciousness that is least under the control of our good intentions, slowest to take training despite our best efforts, and most tied up with the unconscious. Hillman's description of the inferior feeling function well conveys the problem that arises on the basis of this association with what is ordinarily repressed:

Inferior feeling, to sum it up, may be characterized by contamination with the repressed which tends to manifest, as the Scholastic would have said, in ira and cupiditas [anger and desire]. Inferior feeling is loaded with anger and rage and ambition and aggression as well as with greed and desire. Here we find ourselves with huge claims for love, with massive needs for recognition, and discover our feeling connection to life to be one vast expectation composed of thousands of tiny, angry resentments. This expectation has been called an omnipotence fantasy, the expression of the abandoned child with his leftover feelings that nobody wants to take care of – but is this enough? Omnipotence is more than a content; rather it expresses, as does the child, an impoverished functioning that insists upon more sway and exercise. Without this exercise, feeling turns upon itself, morbidly; we are envious, jealous, depressed, feeding our needs and their immediate gratification, then rushing out intermittently to meet someone to help or for help. The cat neglected becomes the unconscious tiger.

– Hillman in von Franz & Hillman, 1971/1998, p. 135

It should be pointed out that this description of the emotional attitude of a function of consciousness in the inferior position is strikingly similar to Adler's description of the inferiority complex (Ellenberger, 1970, pp. 612-613).

- For his seminars, Jung liked to diagram this hierarchy in various ways according to a fourfold model, specifying a superior function, an auxiliary function, a tertiary function, and an inferior function. I have standardized Jung's diagram as follows for my own classes on psychological types: (Figure 1)

图 1: Jung's hierarchy of the types of consciousness in an individual

This diagram can be read as a stick-figure representation of a right-handed person, who might be imagined standing erect with feet together and back placed flush against a blackboard with his or her arms spread-eagled, for the purpose of revealing the relations of his or her functions of consciousness. Each of the qualifying adjectives for the four functions shown in the diagram – superior, auxiliary, tertiary, and inferior – describes the ‘position’ of one of the person's four functions of consciousness in relation to the others. What is suggested is a hierarchy of the functions that, though it

begins according to their degree of differentiation, ends up being as qualitative as it is quantitative. That is to say, the way the function is experienced, both by the person who possesses it and by the others he or she deals with, is as much a result of its position in the total hierarchy of functions as of its actual degree of differentiation. The positions themselves convey certain qualities to the functions that occupy them, as von Franz and Hillman demonstrated for the ‘inferior’ function and I have proceeded to do for the other three positions.

Further, these named positions, as Figure 1 shows, define a pair of axes, a vertical axis (between the superior function and inferior function), which I think of as the ‘spine’ of consciousness defining the person’s conscious standpoint, and a horizontal axis (between the auxiliary and tertiary functions), which for me are the ‘arms’ of consciousness, since it is the task of these functions to handle the relation to the world once the individual standpoint of the person is established.

1.3.2 Type as a method of analysis

- My father, a military man who had commanded a battalion in Korea, was an extraverted thinking type. When I would interrupt the nightly radio news broadcast to offer opinions of my own about what the developments might signify, my father would say, “Shut up, son. You don’t learn from people who know nothing.” My analyst, also a man, never interrupted, or almost never.
- ... in accord with the then prevalent Jungian notion that feeling was more feminine than thinking.
- No such impediment to empowering my thinking came up in my analyst’s initial overt countertransference, and so I experienced the ideal conditions for a therapy described by Carl Rogers and his colleagues: genuineness, unconditional positive regard, and accurate empathic understanding (Rogers & Truax, 1967). For this reason, I became precociously clear about the nature of my own typology as part of my self-experience. I believe that only some such direct experience of the types as one’s own, and the permission to consider them in one’s own way, can enable a patient to avail himself or herself of the individuation potential of the type theory. Otherwise, type becomes another way to learn from others what one is, and a new set of tasks to be learned in the effort to adapt more effectively to the environment. There can be value in type still in discovering new energy for adaptation, but this is not the same as individuation.
- As I have indicated in other writings (Beebe, 1988, 1992), I believe that it is only through experiencing one’s personal, ‘little-s’ self in a way that has ‘integrity in depth’ that the ‘big-S’ Self of Jungian psychology, the instinctive knowledge of how to live, can be authentically accessed.
- The opening up of my typology led to a great deal of energy pouring into my psyche from the Self. My new problem, replacing the depression I had come to therapy with, was a tendency to get too excited. I sometimes imagined my superior intuition was like the head of a rocket ship, ready to take off.¹ I needed desperately to hold myself to the earth, to stay with the tasks associated with medical training. At that early stage, my inferior function, sensation, simply did not have the necessary weight, the specific gravity, to anchor me. But I noticed that my auxiliary and tertiary functions could be enlisted to keep me connected to the demands of the world. Thinking, after intuition my strongest function, and therefore my auxiliary, helped me to define my situation and identify the issues I needed to work on. And my feeling, less confident and more vulnerable, kept me guessing what my impact was on other people and working to discover what my actual relationships with them were. The combined effect of using these two processes, thinking and feeling, was to slow me down and keep me out of the most irrational flights of my intuition. I first became aware in an inner way that my thinking and feeling form an axis, just as my superior intuition and inferior sensation do, when I had the following

¹John Beebe is ENTP type.

dream: A father (a man who was maybe in his fifties) was chasing his son (a young man in his twenties) around a dining room table, waving a butcher knife.

- Working on this dream in my analysis, I was able to associate to the image of the young man. Although the echoes of my feeling reactions to a critical father were clear, the young man in my dream, in his fearfulness, was not anything like my waking personality. At that time, if anything, I had not learned to fear.
- The son in the dream reminded me of a young man I know at the time, whose feeling function was well developed and who thought very slowly. The butcher knife, with its capacity to cleave and dissect, seemed to me the image of a thinking function that makes separating distinctions between things. That an older man wielded it in a terrorizing way toward a younger suggested to me, when I thought about it intrapsychically, that a more developed function was somehow bullying a less developed one. The dream may, of course, have been a commentary on the way I used thinking around my feeling-type friend, but at the time I also needed to focus on how I was relating to myself. I decided that the father symbolized my auxiliary thinking and the son my tertiary feeling. They are related to each other — in the same family — but in my situation at that time the relationship appeared to be a sadomasochistic one.
- It did not satisfy me to see the dream merely as a reenactment of the humiliations I had received from my father in childhood, such as when I had tried, rather rudely, to express the thoughts that occurred to me at the dinner table while his ‘news briefing’ was on the radio. Yes, my father had bullied my introverted thinking with his extraverted thinking, but what I was doing to myself now, as reflected in the dream, was allowing my relatively strong thinking function to browbeat my much less developed feeling function.
- Chastened by the dream, I gradually became less aggressive about applying overriding thinking formulations to the understanding and dismissal of my feeling when it was upset. In time, my thinking became less tyrannical and began to take a more protective attitude toward my shakier, immature feeling. My relation to feeling-type patients and friends also got kinder.
- Dr. Detloff, however, was quite clear that introverted sensation and extraverted sensation were so different that he wondered why they were even both called ‘sensation.’ Later I came to see that introverted sensation concerns itself primarily with finding order, organizing experience, and monitoring the comfort of the body on the inside, whereas extraverted sensation involves compelling, often shared, experiences of the textures, smells, sights, sounds, and tastes of the world — a direct relationship with reality. Similarly, I decided that introverted feeling is mainly concerned with the values that matter most to oneself, while extraverted feeling seeks to connect with the feelings of others. Extraverted intuition, as friends often verified after some of my uncannily telepathic moments in their presence, seemed rather easily to pick up on what was going on in other people’s minds, and it was certainly seeing possibilities in what was more consciously shared with me that others might never have imagined; whereas introverted intuition, I noticed (for instance, in Jung) looked at the big picture in the unconscious, where the gestalts that moved nations, religions, and epochs lay, even in the midst of apparently ‘individual’ experience. And the two kinds of thinking, though both concerned with defining things, also did so in very different ways: extraverted thinking such as my father’s was interested in definitions that would hold true for everyone, according to ideas everyone might agree with, whereas introverted thinking such as mine had to reflect on whether a particular construction really accorded with the conviction of inner truth, regardless of what the received opinion might be.
- Then I dreamed of a woman sitting alone in a room. She was Chinese and had a glum look on her face. The room she was in was bare, without other furniture than the chair she was sitting in. This was so because her husband spent all his

money doping and gambling and so had nothing to bring home. My analyst was very insistent about the importance of this dream. “She doesn’t have anything,” she pointed out.

- I associated to the woman. I knew her in life: she was the laundress at the Chinese launderette to which I entrusted my washables at that time. A practical, unadorned woman, she worked very efficiently. She was clearly no extravert, but she was quite concerned with sensation matters in her introverted way. I decided she was an introverted sensation type. I had recently read von Franz’s essay on the inferior function and also Gareth Hill’s essay on “Men, the anima and the feminine” (1998), which at that time was unpublished, but described eight types of anima, using both the four function types (feeling, thinking, intuition, and sensation) and the two attitude types (introverted and extraverted) to arrive at his eight possibilities for the type of the anima, just as von Franz had done in establishing eight types of inferior function in her essay.
- The husband in the dream who was given to gambling seemed to me to represent a less flattering side of my superior function, extraverted intuition. That seemed to fit the image of the husband as a gambler, someone who pursues possibilities and takes his energy into the world, leaving his introverted wife at home alone, not giving her much. But what did this have to do with me? I did not drink and gamble, but I was drawn to chase after possibilities to extend my life, even after it was time to go home and rest. The newest movie, the latest book, even the next dream one of my patients would bring to me, were causing me to transgress the limits of my personal comfort. For the first time, the importance of the extravert/introvert distinction really was brought home to me. If the husband represented my unbalanced extraversion, the clear message of the dream was that I was neglecting the introverted side of myself, represented by the forlorn and unfurnished anima figure, the Chinese laundress. The dream was saying, very specifically, that my introverted sensation was not getting anything from me. When I conveyed this conclusion to my analyst, she said, “I couldn’t agree more.”
- I thought long and hard about how to rectify that state of affairs. Introverted sensation, I knew by this time, lives on the inside of the body, and seeks to keep it from getting overstimulated, overheated, too tired, too hungry, or too filled with the wrong foods, etc. I looked at what was happening with my patients in my developing psychotherapy practice. I was very excited to hear everything they were telling me, so much so that I was listening with bated breath, neglecting even to breathe properly. No wonder I came home to migraine headaches: I was retaining carbon dioxide. I made up my mind that I would have to attend to my breathing while listening to patients. This opened a series of spaces that allowed me to be aware of my body as I practiced therapy. I then noticed that in my body, as I attended to it, were clues to what was going on in my patient beyond anything dream interpretation could have revealed. If my stomach or chest felt tense, that was a signal that my patient was feeling ‘uptight.’ I found if I attended to these sensations, and eventually took up with the patient the feelings I was introjectively identifying, relevant material would emerge which would move the therapy forward. When I succeeded in getting the patient to express the feelings that my body had picked up, I wouldn’t leave the session with a headache, and I would end the day of doing psychotherapy energized, not depleted. Apparently this method was a tonic for my inner life. A subsequent dream about the Chinese laundress found her happier: her husband had been taking her out for ice cream!
- There is a tradition in Jungian analysis that the type problem becomes especially important when the inferior function starts to ‘come up’ as a topic in analysis, and that then one needs to pay very close attention to the type. Certainly that turned out to be true in my case. Once I knew that my anima was an introverted sensation type, and that I tended not just to be woefully inefficient in this area (as I had recognized as soon as I realized I was an intuitive) but also destructively neglectful (which I had not realized until I dreamed of the Chinese laundress whose husband was not providing for her),

I became much more interested in the exact situation of all my functions, and gave a lot of thought to what in me was extraverted and what introverted.

- There is something seductive about the sense of wholeness that comes with the number four, which Jung considers the archetypal number designating the ‘big-S’ Self. I was at least seven years into my analysis before the four functions that make up my typology were clear to me, and it was hard not to believe that I had somehow ‘arrived,’ from the standpoint of individuation, even though I was only thirty-four years old. Today this seems to be a bit like the naivety of a relatively young person, but the inflation of self-discovery can threaten at any age. To assume that type development ends with the discovery of the inferior function, at which point the Self is constellated and from then on one is engaged in relating to the unconscious in its deeper aspect, can actually interfere with the development of consciousness. In reality, type remains an issue throughout the individuation process, although analysts do not always recognize this.

1.3.3 Type development

- Elizabeth Murphy also takes up this theme in her book *The Developing Child* (1992, pp. 12–13), in which she points out that the superior and auxiliary functions may develop naturally in childhood, but that the tertiary and inferior functions normally do not appear until adulthood. I believe that my first analysis unblocked this normal developmental process in me. One of Myers’s most important ideas, which she and her mother had culled from Jung, was that “For all the types appearing in practice, the principle holds good that besides the conscious main function there is also a relatively unconscious, auxiliary function which is in every respect different from the nature of the main function” (Jung, 1921/1923, p. 515, quoted in Myers, 1980, p. 19).

As Myers insisted:

The operative words are “in every respect.” If the auxiliary process differs from the dominant process in every respect, it cannot be introverted where the dominant process is introverted. It has to be extraverted if the dominant process is introverted, and introverted if the dominant process is extraverted. — Myers, 1980, p. 19

- What I find most striking in these passages is Jung’s assumption that only one function, the superior, is likely to be particularly differentiated. Therefore, the other functions all take on the unconscious character of the inferior function, and operate in a crudely compensatory way. That actually describes the undifferentiated way my unconscious compensated me before I went into analysis, but it was not particularly helpful to understanding the ways my function types sorted themselves out, as to attitude, once they started to become differentiated in analysis.
- One way I was experiencing this differentiation was that I was becoming more particular, and not less, when I practiced psychotherapy, so that I often suffered if a person in my practice had introverted feeling that I could not take care of with my extraverted feeling. I devoted a lot of attention to this problem, and was particularly helped by a passage in von Franz’s essay on the inferior function in *Lectures on Jung’s Typology*. She had been asked the question, “Does an introverted feeling type experience introverted thinking, or is it always extraverted thinking?” She replied:

If you are an introverted feeling type, you can also think introvertedly. You can naturally have all the functions all ways, but it won’t be such a great problem, and there will not be much intensity of life in it. Jung has said that the hardest thing to understand is not your opposite type—if you have introverted feeling it is very difficult to understand an extraverted thinking type—but the same functional type with the other attitude! It would be most difficult for an introverted feeling type to understand an extraverted feeling type. There one feels that

one does not know how the wheels go round in that person's head; one cannot feel one's way into it. Such people remain to a great extent a puzzle and are very difficult to understand spontaneously. Here the theory of types is tremendously important practically, for it is the only thing which can prevent one from completely misunderstanding certain people. — von Franz & Hillman, 1971/1998, p. 64

- I addressed the subject of type incompatibility in my first full-length essay on the role types play in transference, countertransference, and the therapeutic interaction (Beebe, 1984). In that publication, I recommended that analysts try to determine for each of a client's four functions whether that function is being used in an introverted or an extraverted way. I also suggested that the analyst should make an effort to figure out if he or she is deploying that function with the same, or with an opposite, attitude with respect to introversion and extraversion. It is on this basis, rather than whether one person in the therapeutic dyad has feeling as the superior function and the other thinking, or has an extraverted superior function when the other has an introverted superior function, that I established type compatibility, meaning whether there would be easy empathic understanding between the partners or whether there would be frequent clashes.
- That, for Jung, is whether the person's superior function is rational (his term for the evaluative functions, thinking and feeling) or irrational (his term for the perceptive functions, sensation and intuition).
- For me, Jung's approach is the more psychological. When assessing type compatibility between people, I prefer to look at each individual's vertical axis, or spine of consciousness, which connects the superior and inferior function, rather than privileging extraversion.
- Von Franz (1970) and Henderson (1967), focusing on its role in masculine development, relate the excessive reliance on this archetype in daily interactions with others to the narcissistic mother complex of the immature man.
- I am using this term, in tandem with *puella aeterna*, Latin for 'eternal girl,' to refer to the eternal youth in all of us, the brilliant but volatile side of ourselves that is by turns the seemingly immortal Prince or Princess and the helplessly vulnerable, wounded boy or girl.
- The inferior function is the door through which all the figures of the unconscious come into consciousness. Our conscious realm is like a room with four doors, and it is the fourth door by which the shadow, the animus or the anima, and the personification of the Self come in. — William Alex
- She later adds that "when one has become somewhat conscious of the shadow, the inferior function will give the animus or the anima figure a special quality" so that, if personified by a human being, the anima or animus will "very often appear as a person of the opposite function" (von Franz & Hillman, 1971/1998, pp. 67–68).
- In my own work on myself and with patients, I most often found the inferior function, with its uncanny emotionality, to have the character of the anima or animus,⁷ the 'other' within us, which becomes profoundly upset when its ideals are not met and nearly ecstatic when they are. It had been symbolized that way by my dreams of the Chinese laundress. I could then diagram my four functions again, showing the archetypes associated with them as I had encountered them.
- My shift into Latin in naming the archetypes associated with the tertiary and inferior functions is deliberate. These functions, though still part of one's complement of ego-syntonic consciousnesses, are more archaic than the superior and auxiliary and present themselves in more classically 'archetypal' ways, having a god-like entitled quality to them, whereas the superior and auxiliary functions are more adapted to this time and place and more considerate of the perspectives of one's contemporaries.

- *Beebe's model of type* This archetypal analysis of the first four functions provided the basis for the model of type I was able to present at the Chiron Conference for Jungian psychotherapists held at Ghost Ranch in Abiquiu, New Mexico in 1983, and to write up in my 1984 essay, "Psychological Types in Transference, Countertransference, and the Therapeutic Interaction." It has proved very helpful both to me and to others in clarifying how a well-differentiated consciousness might arrange itself in the course of individuation. We might note several features of this model.

图 2: FIGURE 3.3: My orientation with archetypal complexes

1. The model asserts, with Jung and subsequent Jungians, that if the superior function is irrational the auxiliary will be rational, and vice versa.
 2. It agrees with Myers and the MBTI counselors that if the superior function is introverted the auxiliary will be extraverted and vice versa.
 3. The model specifies the tertiary function as opposite in attitude to the auxiliary just as the inferior is opposite in attitude to the superior.
 4. Following the Jungian tradition, the model maintains that if the superior function is rational, the inferior will likewise be rational; if the superior function is irrational, the inferior function will also be irrational.
 5. The tertiary function is represented as matching the auxiliary with respect to rationality or irrationality.
 6. The model therefore defines two axes of consciousness, one between the superior and inferior functions (spine), the other between the auxiliary and tertiary functions (arms). If the spine is rational, the arms will be irrational and vice versa (see Figure 3.4).
- *type development and this model* I believe that this model makes sense of the way the types differentiate in someone who is showing what Myers calls "good type development" and Jung would call individuating according to the law of his or her own being. It does not account for the many falsifications of type (Benziger, 1995) that involve substituting other functions out of a need to satisfy or defend against the type demands of an environment that is not facilitative of individuation.

1.3.4 Types of the shadow

1. *the four shadow functions has to be developed as well* Watsky pointed out that Jung lists eight functions of consciousness in Psychological Types. If someone succeeds in differentiating four of those functions to achieve the good type development of which Isabel Briggs Myers had spoken, Watsky said, it's as if the north 40 acres of their psychological

field has been hoed; the person still needs to cultivate the other four functions: the south 40. These four were presumably in shadow.

2. *witch/senex* Like all the shadow archetypes, the witch 'fights dirty' to defend the personality. She uses her capacity to cast spells that immobilize in an underhanded way, but this is a survival consciousness that resides in the shadow that can be used to stop others in their tracks when they are threatening the personality or its values. In terms of gender politics, the witch uses her feminine authority in a way that can be extremely paralyzing to the anima of a man. In a man's psyche, the shadow side of the good father would be the senex, which exerts the same sinister limit-setting control when he 'pulls rank,' and which can similarly paralyze a woman's animus. I have since learned that the negative 'witch' and the senex can appear in both genders as a kind of "withering authority" (Frey, 2011) that can be both dogmatic and mean. And I have often come to see the wisdom in the limit-setting of these archetypes, despite their initially sinister presentations.
3. *shadow archetype carries opposite attitude* It was clear that the shadow archetype carries the same function of consciousness as its ego-syntonic counterpart, but with the opposite attitude with respect to extraversion and introversion.
4. *opposing* The most unexpected discovery was the archetype I call the opposing personality, which is characterized by behaviors that may be described in the language of character pathology: oppositional, paranoid, passive-aggressive, and avoidant. This is a shadow that is very hard to see in oneself (it seems to fall in the blind spot of the superior function) and very easy to project onto another person, especially a person of the opposite sex. The archetype of the opposing personality often appears in dreams as a contrasexual figure, but, unlike the anima, the opposing personality is antagonistic to the ego rather than helpful in connecting it to the needs of the Self. Classical Jungians have sometimes identified this figure that opposes, criticizes, and seduces the ego as the 'negative' animus or anima, but this intuitive shorthand ignores the real type difference between the opposing personality and the anima or animus.
5. *types should be used for sorting out the empirical material* In associating to a dream figure, it is important to try to establish the figure's psychological type, which is often surprisingly easy to determine. At the Ghost Ranch conference, I called attention to Jung's foreword to the Argentine edition of *Psychological Types* (1936/1971, p. xiv) in which he had emphasized that the theory of psychological types should be used not as a way of classifying people but for "sorting out the empirical material" that comes up in the course of a therapeutic analysis. The method of analysis that results has the advantage of enabling a patient to see where a particular complex lives in the psyche.
6. *opposing Ni example* In my practice, I seemed to keep encountering a certain kind of introverted intuitive woman who I felt would not 'come clean' with her intuitions, so that I would experience her as being stubbornly resistant to the therapy. Only gradually did I come to recognize that the oppositional woman was even more characteristic of a side of myself, and that to some extent I had been projectively identifying her onto introverted intuitive clients who might have certain "hooks" to catch the projection.
7. *Fi trickster* The trickster was the one aspect of my shadow that I had worked on fairly early on in my analysis. However, I had not thought of my trickster as having a type. It had, however, often been projected onto difficult male or female analysands whose intense subjectivity seemed constantly to undercut my efforts to help them with psychological understanding. These were analysands who might have fit the diagnostic criteria for borderline personality disorder, which I have elsewhere discussed as a "primary ambivalence toward the Self" (Beebe, 1988), but the issue that kept coming up for me was the degree to which my feeling was no match for the patient's. In the service of being a good doctor, I was trying to use extraverted feeling in a sincere, compassionate way that begged the hostility the patients were directing

toward me. As one man put it to me, “Western medicine, Eastern too if you consider Buddhism, is based on compassion. When people are compassionate toward me, I become this bitch.”

8. *Fe vs Fi trickster* It was in this feeling context that I came more personally to understand the difference between extraversion and introversion. I had concentrated on developing my extraverted feeling, since I recognized that as a relatively weak function in myself, and since this consciousness was carried in me by the archetype of the puer aeternus, I could leap to unusual heights of empathic compassion, privileging the other person’s feeling above my own. I would, however, plunge to the depths of despair when the person I was dealing with abandoned my feeling for their own and did not show any gratitude for the compassion I was dispensing. Gradually, I learned that this was a normal difference between extraversion and introversion. In meeting a situation that involves another person, extraversion moves to create a shared experience, by reaching out to ‘merge’ in some way with the other person (Shapiro & Alexander, 1975), whereas introversion steps back from the experience to see if it ‘matches’ an archetype within that carries an a priori understanding of what an experience like this is supposed to consist of. As I learned to honor my introverted feeling, which in the manner of a trickster did not feel bound by medical and Christian cultural expectations, I learned to make statements such as “I’m not sure I can work with you if it’s going to be this negative.” I had realized that the bullying I had been receiving from my ‘borderline’ patients did not accord with my introverted feeling sense of what a mutually respectful medical treatment ought to be like, and, once I had grasped the validity of this perspective, I was able to assert it in a way which, though it was a manipulation of the transference, enabled my difficult patients and me to work together in an atmosphere of more regard, if not for each other, which would be extraverted feeling, at least for the value of what we were trying to accomplish. I found my patients could accept this, even though they still had much ambivalence, envy, and negativity to work through in their actual experience of me as a person.
9. *Te senex* The senex extraverted thinking was particularly hard to see as a part of myself. I had thoroughly projected this onto my father, But there was a side of me, too, that could be quite arrogant and dogmatic in the way it delivered its opinions and interpretations. This was my senex extraverted thinking.
10. *demonic Se* The demonic personality, then, is that part of ourselves that operates in the shadow to undermine others and ourselves. Certainly in my own case that is extraverted sensation. My body language is often the opposite of what I mean to convey. My relation to physical geography is such that, when trying to find my way along an unfamiliar route, the opposite of where I think I should be going is almost always the correct way. But most importantly, I sometimes misjudge in therapy the relative distance from consciousness of an unconscious complex and assume, with my optimistic extraverted intuition, that the client is ready to benefit from openly discussing something that the client is, in fact, not ready to look at yet. This miscalculation of psychological reality can lead to interventions that shock the client and, for a time, undermine the therapy. Occasionally, such interventions can also enliven a therapy that has become too polite, reminding us that, just as Lucifer is the light-bringer, the demon is sometimes a daimon.
11. *summary* By this point, I was convinced I had been able to locate all eight functions of consciousness in myself and to see how the archetypes that were carrying them operated to structure my dealings with others. (See Figure 26)
12. *inferior function and implicitly its demonic shadow, from von Franz* The little open door of each individual’s inferior function is what contributes to the sum of collective evil in the world. You could observe that very easily in Germany when the devil slowly took over the situation in the Nazi movement. Every German I knew at that time who fell for Nazism did so on account of his inferior function. The feeling type got caught by the stupid arguments of the party doctrine; the intuitive type got caught by his dependence on money. He could not give up his job and did not see how he

Conscious		
Hero/heroine	<i>area of strength and pride</i>	Organizes adaptation, initiates individuation
Father/mother	<i>area of fostering and protecting</i>	Nurtures and protects others
Puer/puella	<i>area of immaturity and play</i>	Endearing, vulnerable child who copes by improvising
Anima/animus	<i>area of embarrassment and idealization</i>	Gateway to the unconscious
Unconscious		
Opposing personality	<i>area of frustration and challenge</i>	Defends by offending, seducing, avoiding; self-critic
Senex/witch	<i>area of limit-setting and control</i>	Defends by refusing, belittling, inactivating; sets limits
Trickster	<i>area of manipulation and paradox</i>	Mischievous, creates double binds, circumvents obstacles
Demonic/daimonic	<i>area of undermining and redemption</i>	Undermines self and others; creates opportunities to develop integrity

表 26: (FIGURE 3.7) Archetypes and the areas of personality they pattern

could deal with the money problem, so he had to stay in it despite the fact that he did not agree, and so on. The inferior function was in each personal realm the door where some of this collective evil could accumulate. Or, you could say that each one who had not worked on his inferior function contributed to this general disaster—in a small way—but the sum of millions of inferior functions constitutes an enormous devil! Propaganda against the Jews was very cleverly made up in that respect. For example, the Jews were insulted as being destructive intellectuals, which completely convinced all the feeling types—a projection of inferior thinking. Or they were accused of being reckless moneymakers; that completely convinced the intuitive, for they were his inferior sensation, and now one knew where the devil was. The propaganda used the ordinary suspicions that people had against others on account of their inferior function. So you can say that behind each individual the fourth function is not just a little kind of deficiency: the sum of these is really responsible for a tremendous amount of trouble.

13. **Beebe's explanation** What she is describing here is a relation between the inferior function and a demonic function that tests the integrity of the inferior function. To the degree that the inferior function has not been taken up as a problem by the individual in the course of the development of his consciousness, it is no match for the demonic aspect of the unconscious, rather like the Chinese laundress in my dream who has no power to stop her husband from spending all his money drinking and gambling. At the time I had that dream, I felt the husband represented my own superior function of extraverted intuition; now I would say he represents a much more shadowy aspect of me, my extraverted sensation (which, like the husband in the dream, is usually not even seen). At the time I had the dream, I felt it was necessary for him to take better care of her, i.e. that I should take better care of my anima. But a healthier anima would also have the integrity to stand up to him, bringing her integrity to bear upon his problem of character (Beebe, 1998).
14. **good type development** As the notion of good type development moves, both in MBTI counseling and in Jungian analysis, toward a 'whole type' eight-function model, in which each of Jung's eight types of consciousness is represented within a picture of the person's consciousness that includes both ego-syntonic functions and functions in shadow, the ethical aspects of this development will become ever more evident. Gradually, perhaps, consciousness will realize its potential to become conscience.

1.4 (§4) Archetypal aspects of masculine adaptation

1.4.1 Prologue: masculine psychology

1. *module and role* The masculine mind, as I have encountered it in men who have submitted their mental processes to me for therapeutic analysis, organizes itself according to separate modules of identity, each for a time lived as if it were his only self—that is, identified with, defended, and reified into a role by which the man who latches onto it tries to live—unless of course the man is preferring to dissolve his mind in a Dionysian way with the aid of alcohol, drugs, music, a sex partner, or even a mood, in which case his femininity emerges to release the disorganized flow that Woolf describes, though often without her accompanying ambition to find a self that will make the flux cohere.
2. *masculine and Jung's psychology* For this reason, the categorical nature of Jung's psychology of the unconscious has often been one of its most compelling features for men. In the archetypal complexes that Jung was the first to identify as ingredients of personality, a man can recognize his part personalities—the roles and values that he might choose to take up when trying to adapt to living in the world in a masculine way. Men often focus their efforts in therapy on living up to one particular role. Part of the job of the psychotherapist in that situation is to see how the patient's psyche is responding to his unconscious decision to disregard the other identities and values that are available to him.
3. *reader suggestion* As the reader explores the different archetypes that I present here, she or he should keep in mind that the role each implies could seem to some men like just the way a man is supposed to be.

1.4.2 The hero

1. *definition* We might start, as the study of archetypes usually does, with the hero. “The hero,” Jung (1989) tells us, “is the symbol of the greatest value recognized by us” (p. 57). In our culture, with its patriarchal system of education modeled upon the Greeks and Romans, perhaps the greatest values imparted to men are achievement and responsibility. These standards cannot be met by someone who lacks autonomy, accuracy, and self-control—aspects of self-reliant agency that are exemplified in the myths of the hero (Segal, 1990). Stories of the hero continue to have wide appeal in our culture and to exert profound psychological influence. From the standpoint of depth psychology, the hero is the archetypal role model for ego-identity, described for his fellow psychoanalysts by Erik Erikson as “the accrued experience of the ego's ability to integrate all identifications with the vicissitudes of the libido, with the aptitudes developed out of endowment, and with the opportunities offered in social roles” (Erikson, 1963, p. 261).
2. *hero development example* What is significant for the psychology of a man's development as we encounter it in analytical work is how often the image of the hero will appear in the psyche of a client beginning to consolidate his identity out of the lost state of mind that has caused him to seek treatment. One of my clients first came to me when he was 19; he was recovering from a brief psychotic breakdown in college. His need to develop his own psyche separately from the excessive superego expectations of his parents soon became a theme of the therapy. After the first few months of our work, he dreamed he was at a political rally where a new leader was chosen by the vote of those present. After he had this dream, his life changed and it was almost impossible to believe that the patient had ever been psychotic. For years thereafter he consistently displayed a strong, decisively masculine ego, and soon moved forward into high levels of achievement, marriage, and a successful professional career. The hero figure, elected by the political party in his dream, evidently went on to take office in his psyche: in retrospect, it was the image of the emergence of ego strength in this patient.

3. *characteristics* Jungian theory offers a way of understanding the hero figure in a man's psyche that is even more precise: the hero symbolizes what Jung calls the dominant function of consciousness and is thus an image of the cutting edge of the ego. For Jung (1939/1959), "Consciousness needs a centre, an ego to which something is conscious" (¶506). But this is not all. Will is perhaps the most characteristic attribute of the ego once it assumes its place at the center of consciousness, and I could certainly see that strong will emerge in my patient, who effectively took charge of his therapy after having this dream, by asking me to hurry up, be more concise, get to the point, and so on.
4. *liberation via hero development* His ability to take heroic precedence over me in directing the therapy permitted him to develop a dominant ego that would free him from his parents and allow him to become his own man.

1.4.3 The puer aeternus

1. *definition* In our time, the term puer aeternus has staged a return in Jungian psychology to indicate a man who "remains too long in adolescent psychology" (von Franz, 1970, p. 1) and, although charming and promising, is ultimately unreliable.
2. *client example* He looked like a young Lord Byron, and his air, in the outpatient clinic where we met for psychotherapy, was imperious and dismissive. (...) Since he is special, he sees "no need to adapt." He evinces an: arrogant attitude towards other people due to both an inferiority complex and false feelings of superiority. (...) In relationships, too, the right partner is never found, because no one can match the ideal person the patient is looking for.
3. *how to help this client* One way to help such a person is to engage his feelings about the therapeutic relationship. In my patient's case, getting him to express his anger at having to be in therapy at all helped to ground the work and move it in the direction of real adaptation. It turned out that he was irritated with the power imbalance of therapy and that this was why he was treating me with such disdain. Our work finally addressed this reality when I insisted that he show a measure of respect for my role as therapist. Predictably, this made him furious, but his fury brought his human ego into the relationship. In Jungian terms, the centerpiece of his ego was introverted feeling, which is very sensitive to imbalances of power. He told me in no uncertain terms that it was I who was being pompous. It would have been tempting to put this down as projective identification, but accepting his resentment of my assertion of power was the more helpful course.
4. *changes seen afterwards* Discriminating the appropriate and inappropriate uses of power is something people with strong introverted feeling are good at; this function is often symbolized in dreams as the judge. As the patient became less 'above it all' and more directly confrontational with me, he gradually began to make more realistic judgments as to what he needed to do in his own educational, vocational, and romantic life.
5. *deeper empathy* This bit of case illustrates how first recognizing the archetype effectively possessing the person and then identifying the psychological type of the patient's real ego, which has been buried in the archetypal presentation, can be ways for the Jungian therapist to more deeply empathize with the nature of a patient's struggle in life.

1.4.4 The trickster

1. *definition* A third archetype that not infrequently makes its appearance in the psychotherapist's consulting room is the trickster. It is one that is problematic for analytical work, because the very ethos of this kind of psychotherapy is a commitment to being sincere and vulnerable. A man identified with the trickster archetype is anything but sincere and vulnerable. The archetypal thrust of the trickster's restless energy is to resist having to do things the way others think is

right. The trickster toys with expectations, flouting rules that attempt to uphold standards of behavior and questioning the values of those who defend the standards (Radin, 1972).

2. *double bind example* It was this communication that impressed him and motivated him to change his life, and for more reasons than I could have known at the time. A year and a half into his therapy, he mentioned that when, in high school, he had told his stepfather that he dreamed some day of going to graduate school, the stepfather had coldly replied, "I don't care what you do; I don't care if you sell your body." In the therapy, the young man had finally met someone who didn't accept the terms of the double bind he had been placed in by the stepfather's remark, that the only way for him to get an education, including even a psychotherapy, was to disregard his own feelings.
3. *for therapist* When the trickster appears out of the psyche of a patient, its calling card is usually a display of the archetype's capacity to put both others and oneself in a double bind (Beebe, 1981, p. 38). The patron divinity of alchemy, the wily Roman god Mercurius, is often referred to as "duplex and his main characteristic is duplicity" (Jung, 1948/1967, p. 217). Contemporary men who have aligned their survival strategies with the trickster archetype can be quite duplicitous when urging their psychotherapists to support personal choices that are, in fact, highly untherapeutic. The analytical therapist will want to recognize that the trickster is operating in the patient, but that is not enough. The therapist will have to have integrated enough trickster of his or her own to be able to turn the double bind around and reverse the terms of the hard bargain that the trickster in the patient is trying to drive. When the patient initially told me that he could not pay for the therapy unless he went on working as a prostitute, I felt the cage of the double bind closing in around me. By making him see that he would not be able to have me as a therapist if he continued his prostitution, I managed to turn the trap back on him and by so doing signaled him as well that I was at least potentially equal to the challenge of being his analyst.

1.4.5 The shadow

1. *definition and overview* With his deceptions, manipulations, and rule flouting, the trickster can be an effective archetypal force for self-defense in a dangerous world, but his is not the only available approach. Sometimes we fend off threats by pulling rank, by identifying and pointing out the opponent's weaknesses with chilling, withering remarks. This is the bailiwick of the senex archetype—the critical, saturnine, old man who, metaphorically speaking, paces up and down inside each of us, waiting for his chance to put troublesome people in their place. Or we may respond to perceived danger in still more unconscious ways, undermining and devastating a potential enemy through actions, formulations, and evaluations that are nearly as surprising and unexplained to us as to others. This is the work of a part personality, or archetype, that I call the demonic personality. Or, finally, we may defend ourselves through avoidant or passive-aggressive actions including seduction, or through direct attack, the realm of what I call the opposing personality. These four archetypes—trickster, senex, demonic personality, and opposing personality—comprise, in my judgment, the cast of characters that make up the enormous region of individual personality that is repressed by most people—what Jung called the shadow.
2. *shadow is repressed* The shadow is repressed because it is felt to be incompatible with a person's moral values. It retains, and from time to time expresses, feelings, motives, desires, and ambitions that the person has long since decided are unworthy, because they do not accord with the individual's idea of how people should feel, let alone behave. Since it usually is not owned as part of the person, the shadow has a great deal of autonomy, which allows it from time to time even to escape repression, so that it can act out the very strivings that the ego has rejected as incompatible with its standards. I have found it helpful to think of the shadow as the 'ego-dystonic' part of our consciousness. Just as the

'ego-syntonic' personality will develop over time, so too does the shadow develop in the course of life, differentiating itself in ways that are decidedly contrary to the ideals associated with the ego's usual identity.

1.4.6 The opposing personality

1. **definition** One of these shadow archetypes of consciousness, the opposing personality, consists of a cluster of defenses of the self that are used to oppose, rather than unite and work with, others. The opposing personality fuels the defensive character styles—passive-aggressive, paranoid, avoidant, and histrionic—we sometimes see in our patients. Deployed internally, this consciousness can end up opposing one's own best interests in perverse ways.
2. **grip** Archetypally, the opposing personality is one of two places in a man's psyche where his contrasexuality, that is, his inner femininity, is likely to show up strongly. In the grip of the opposing personality, a man may make 'bitchy' remarks or unleash a seductive sexual charm whose purpose is to exercise control over others.
3. **relation to anima** The other place in the psyche that has a contrasexual coloring is the anima, which Jung defines in *Psychological Types* as a soul figure representing a man's inner attitude (Jung, 1921/1971, ¶808) and in his later writings as "the archetype of life itself" (Jung, 1954/1959, ¶66). The anima, however, holds a potential for leading the man toward integrity. The same cannot usually be said of the opposing personality. We will return to the anima later, but we should note here that, when projected onto an actual woman, even one the man hardly knows, his veneration for the anima may lead him to idealize the woman and want to marry her. Projecting the opposing personality, by contrast, will cause a man to see the woman in a negative or troublesome light as she seems to embody the man's own antagonistic traits.
4. **complexity** Though in a strict type sense, it is nothing other than the shadow of the heroic superior function of the ego, the opposing personality, as I have studied it in myself and my clients in analysis, turns out to be a highly complex state of mind. Because it has many facets, analysts who have tried to describe it usually end up doing so in partial ways only. Though they can see and focus upon the seductiveness, avoidance, passively enacted aggression, or paranoia they see in the person using the opposing personality, often they neglect to connect the dots and so lose the oppositional quality of the archetype as a whole.
5. **covert defense** The bitchy opposing personality can take on a life of its own in any man, no matter how secure he seems to be in his masculine identity. Not that the man usually sees how his personality has been taken over by an oppositional attitude! Like Kevin Spacey's character in the film *American Beauty* (1999), he may feel he is simply asserting himself, reclaiming his masculine birthright, and should have done so long ago. But if the man can catch himself in the act of enacting his opposing personality in a way that is obviously not worthy of him and put a stop to it, the contrasexuality of the figure, its shadowy nature, and the reality that this is a part of himself that he would prefer to get past, will sometimes be made evident to him in a dream.

1.4.7 The father

1. **father hunger** It is the absence of any transmission of father energy that creates the father hunger that leads a young person to seek an actual older male with something to transmit; hence the frequent conflation in young people's minds of the father with the archetype of the Wise Old Man. (In the seven-novel *Harry Potter* series by J. K. Rowling, we see something of this in the relationship between the student wizard Harry Potter and the headmaster Dumbledore.) The body of the father is not only his physical presence or his literal role as the source (if he is) of the child's genes but the body of knowledge about fatherhood that he has to transmit.

2. *archetypal definition* A vital part of a man's masculinity is caught up in how potent or impotent he feels as a man with something to impart, and that may be the archetypal definition of what a father is, since it applies equally to men who have never had children and to men who have.
3. *transmission and transference* To understand the father archetype and the role it creates for a man, we have to first recognize the man's need to participate in the archetype, to receive love and lore from a father, and to be able to transmit the same to a son or daughter. As psychotherapists, we have to recognize the absolute necessity for some men to work extraordinarily hard to be able to have something to transmit to their children, often along material lines. And we have to take very seriously the efforts of unmarried, unpartnered, childless men to offer valuable lessons they have learned to the next generation. Not infrequently, this comes into the analytic transference at times when the patient is trying to teach the therapist something. Such enactments are not resistances to the analyst's authority; they are the patient struggling to find a voice and an authority to participate in the transmission.
4. *the father "mentors"* In the Jungian typology of a man's consciousness, the nurturing father archetype will be associated with the auxiliary function, not the dominant function, so that, as the father archetype comes into play and becomes important to the man, he must loosen his identification with the archetype of the hero. The hero is forever proving his own mastery. The father, by contrast, seeks to help the people he mentors to be, and feel, more competent. He cannot do that if he is in competition with them.

1.4.8 The senex

1. *origin* The shadow of such a father is the senex. Like other names Jung selected for unconscious archetypes, this one takes origin in Latin, where it means 'old man.' It is the root word of a more familiar borrowing from Rome: senator. Anyone who has listened to a confirmation hearing of a cabinet officer or Supreme Court justice in the United States Senate will recognize the questioning style of the archetype, which regularly voices a depreciative and skeptical, if not frankly cynical, interpretation of nearly anyone's suitability to take the office for which he or she has been put forward.
2. *senex can be a self-critic* This is how a display of the senex by men often affects women in a working situation. Interestingly, the senex archetype, when internally active as a withering self-critic, has the same silencing and deadening effect on the feminine figure inside the man, the anima. Since she is the "archetype of life itself" (Jung, 1954/1959, ¶66), all the vitality seems to drain out of the individual. Captured by the senex, the remaining persona seems old, dry, and absent of animation; all that remains is cynicism, a tendency toward depreciation, and despair. To hear the senex's reiterative insistence on life's lack of meaning, value, and future (at least for the person for whom the senex is speaking) makes one realize how much this is the voice of major depression. In the most extreme case, there can be the psychotic delusion that one has actually died and one's guts are rotting.
3. *senex is more likely to react against trickster than puer* Men identified with the senex are notoriously savage toward puer aeternus-identified men (Captain Hook vs Peter Pan), but the more everyday games of cat and mouse played by the senex are with the trickster. The senex takes a grim pleasure in catching the trickster at chicanery, which of course upholds the senex worldview that people are not to be trusted.
4. *grip of senex* Owing to his saturnine presentation, the man in the grip of the senex can be hard for a therapist to empathize with. It may help to realize that the senex is an archetype that emerges when a personality feels itself to be going into decline.

5. *false sense of heroism* At such times, when a personality feels itself to be losing control of the situations in which it must continue to function, the senex archetype resorts to strategies that simulate heroism. This is epitomized in the madness of Don Quixote, during which the protagonist models his entire heroic persona on fictions. Once people start to observe him in this role, the Don simply keeps on enacting what he believes, deludedly, he is already famous for and does so with monomania (Beebe, 2007).
6. *what senex is looking for during grip* The very same behaviors can be seen in any man in the grip of the senex archetype. Such a man is not above adding a measure of tricksterism to his act, to convince himself, and the world, that the hero archetype has in fact been revitalized by him. It is amazing how often others collude with the fiction that some real power has been revived. James Hillman has spoken to what the senex is finally seeking: “Longings for superior knowledge, imperturbability, magnanimity express senex feelings as does intolerance for that which crosses one’s systems and habits” (1989, p. 208).
7. *relentless paradox* But doesn’t this betray a sense within the person that his life is actually futile, and that all that remains to the former hero is to extract from others a measure of respect for the fantasy that he continues to mean something? Therapists working with depressed patients who are identified with the senex find themselves in a paradox. The ever self-critical patient can run his life down in a relentlessly punitive way, but the therapist is usually not allowed to breathe a word that might expose the fictions by which the patient is living. In my work with men in the grip of the senex archetype, if I am given anything like a chance to intervene in their lives, however, I take the opportunity to challenge these fictions.
8. *patient example: dog with drooping head* Here is an example of what I mean. At the outset of my psychiatric career, I had as a patient a 55-year-old plumber with a chronic depression, who at that time was seeing me in an outpatient clinic only for refills of an antidepressant. During our monthly sessions, I kept hearing from him how his wife was always ‘on him.’ The only evidence the patient could muster, however, was a mildly sarcastic remark she had made. But asked if he ever dreamed, he responded with more animation:

Why, yes. Last night I had a dream about my little dog. I was holding him up in my arms, and he was looking up at me every so tenderly, when suddenly he seemed to droop his head like he was going to die.

I asked the patient to tell me about his dog. It turned out that he loved his pet above all other things because the dog was always sweet and cheerful. I then asked the man if this dog might not be his own cheerful disposition, which had faded into despondence after his wife’s sarcastic remark. My patient seemed to like this idea.

9. *patient example: perpetrator and victim at the same time* At the next monthly session, the patient related another dream. “The dog was there again, sitting at my feet and looking up at me. As I watched, its face turned into a vicious wharf rat.” The patient told me that he had seen wharf rats in his younger days when he often worked on the harbors “around people that were hardly better than wharf rats they were so mean.” Pursuing the lead of the previous month’s session, I asked my patient if he was ever mean, if he ever lashed out. “Well if you put it that way, doctor, I guess I do. Oh I don’t like that dream. I hate to think my little dog would turn into a wharf rat.”

“Yet that’s what seems to happen to a good disposition when a person gets mean,” I responded.

It was not easy to confront this patient, already depressed, with the reality that he could be the perpetrator as well as the victim of meanness, but this is what the dream seemed to be saying. This was the first picture this patient ever had of

his mood problem, and he marveled at the insight it gave him. Then, for the first time, he allowed himself to tell me that he launched nightly into verbal attacks against his wife, not unlike the content of his monthly sessions, when he would belittle her to me. His wife's occasional barbed remarks turned out to be her weak defenses against the things he said.

"I can be pretty cruel, doctor," he admitted.

10. *patient example: getting better* The following month, the patient brought his wife to the medication clinic with him. She turned out to be a quiet, timid woman, somewhat frightened of her husband. She reported that he upset her with his critical remarks, but lately there had been some improvement. For the first time, she had been curious to see his doctor, and the patient had been willing to bring her. This contact opened the door to some much needed couple work.

1.4.9 The demonic personality (This section is not trimmed)

1. *coincidence of opposites is found in demonic personality* If the transformation in this patient's dream of the sweet dog into something as unequivocally beastly as the wharf rat suggests more than just a shift from ideal mood to depressed mood, what other shift is implied? The image has something to do with good and bad character. Dreams in which figures associated with the ideal are juxtaposed with images of the beastly also suggest a mythologem that involves just this coincidence of opposites, which we know today as the fairy tale of "Beauty and the Beast." This is a tale that goes to the heart of a paradox we find in the demonic personality—that though it is an image of undermining pathological narcissism, it can, when confronted and contained with integrity, start to make an effort to be unusually compassionate.
2. *both undermining and positive* My hope is not to be sentimental in presenting this possibility, but to present the evidence for it. Clinical observation has shown me that the function of consciousness that is most distant from our ego consciousness can be deployed in both terribly undermining and in surprisingly positive ways. In a man whose hero consciousness expresses itself through extraverted sensation, for example, the function of extraverted intuition tends to take on a perversely destabilizing role, leading him to embrace the wrong possibilities and reject the right ones, except when, very occasionally, it is the source of a moment of unexpected good sense. Likewise, if introverted feeling is the man's leading, heroic function, then he tends instinctively to use introverted thinking to undercut himself and other and only occasionally 'gets it right' with that function.
3. *Beauty and the Beast* Looking through the lens of typology at the figure of the Beast in the Disney version of the tale (*Beauty and the Beast*, 1991), I see an extraverted feeling character, locked into a demonic presentation of his caring for Belle. Belle, however, seems to operate with introverted feeling, so like Ilsa and Rick in *Casablanca*, they stand in shadow relation to each other. (The rather unattractive heroic figure in the story, Gaston, embodies extraverted thinking, as he is always making plans for everyone and is blind to the feelings of others.) But, if Beast is Belle's shadow, her visit to the castle of the Beast, then, is not just to rescue her father; it is also to engage in a transaction with this other side of feeling. In gratitude, Beast, who has been enchanted so that he cannot love, falls in love with her and both their lives are transformed.
4. *Film: As Good as It Gets* A live action film that perfectly conveys the psychological idea I find in this story is James Brooks's *As Good as It Gets* (1997). It presents Jack Nicholson as Melvin Udall, a severely obsessive-compulsive man who is a misanthrope, and Helen Hunt as Carol Connelly, who in her humble job as a waitress at the corner restaurant he frequents brings an ethic of care to all her transactions.

For Melvin, she is an image of perfect integrity. Melvin, by contrast is classically demonic—absolutely undermining to others. The opening sequence of the film shows him pursuing his neighbor’s messy dog, which has somehow gotten loose in the hall of the apartment building, so that he can throw the dog down the trash chute to the furnace in the basement.

It is hard for most audiences to recover from this display of Melvin’s cruelty, made no less palatable by the sweet voice Melvin uses to cajole the dog to let him pick it up. Their ambivalence toward Melvin is mirrored by Helen Hunt’s Carol, who thinks of him as an impaired person. What we all miss about Melvin, however, is the emotional intelligence buried in his pathological presentation. He is the only person who realizes the difficulty Carol has seeing her integrity. Melvin’s place in her life turns out to be to mirror it to her. So in this variant of the tale, it is not just Melvin’s Beast who needs somehow to be transformed into a sensitive partner, but it’s Carol’s Beauty, who needs to think out of the box of her own perception. In fact, it takes love from someone she assumed was pathologically narcissistic (Melvin) to bring the beauty of her soul home to her. The great strength of Jack Nicholson’s performance is that his Melvin credibly does so.

In Melvin’s case, the same extraverted feeling function he was using in a pathologically narcissistic way at the outset of the film is by the end being used in a constructive, relationship-building way. The reason for the change is that he has been engaged by the integrity Carol commands. If we interpret these characters on the intrapsychic level, as part personalities, they demonstrate that pathological narcissism in a man can be overcome if the anima is empowered to engage constructively with the most demonic personality. Melvin begins to use his extraverted feeling to mirror Carol’s integrity, and she is profoundly touched. In this way, the spirit of love enters her psychological world through the shadowy Melvin. And when Melvin says, “You make me want to be a better man,” it has a ring of truth.

5. *how to change the demonic personality* To get to this truth in outer life, it has to be experienced in an intrapsychic way first. Otherwise the narcissistic man will repeatedly set up people to imagine that they can easily save him from his pathological narcissism by carrying for him the integrity his demonic personality craves and then he will disappoint them. Instead of a dependency on other people who have integrity, I am imagining the pathological narcissist finding the place of his own integrity, and I know that this is possible because I have found repeatedly in my years of working in depth with men that this is what they most appreciate discovering from psychotherapy.
6. *patient example: “vibration” due to narcissistic father* The more integrated the person is, and the higher functioning, the harder the time he may have recognizing the demonic side of his personality. A man in his early fifties had been in psychotherapy for several years with a male analyst for help with a pathologically narcissistic father, whose demands on him had escalated when the patient had entered midlife and started to become successful in his work. The patient’s whole psyche would be set vibrating simply by his father’s ringing him up on the phone. At first, however, the patient did not know that his psyche was vibrating: his wife had to tell him, when she picked up the ‘vibes,’ which she experienced as physically painful force fields coming from him that were intolerable to her.

Here, the wife was like Helen Hunt in *As Good as It Gets* saying to Melvin, “I can’t do this” when he tries to walk with her while obsessively avoiding stepping on cracks in the sidewalks. The patient was, metaphorically, trying to walk around the crack in his own psyche, and his wife was feeling the pain that emanated from it.

Her integrity in confronting him was soon matched by his integrity in identifying the dissociated mental state for himself, verifying that he was, in effect, ‘vibrating,’ with both fear and rage at his father’s intrusiveness. He figured out that what upset him about the calls was his father’s habit of heaping abuse on other family members in a way that allowed no possibility of coming to their defense. By the end of each call, this son would be literally shaking. He found a way of explaining to his father that he could no longer take calls from him, the symptom of terrified agitation subsided, and the

wife pronounced him far easier to live with. With the father under control and the relationship with the wife moving out of the danger zone of her limits of tolerance, the man felt that he was ready to leave psychotherapy.

7. *follow-up: undermined by demonic personality* Within a few weeks of doing so, however, he noticed that he was experiencing an entirely different level of difficulty. Now it was not with his father: it was with himself. He would find himself in certain situations, particularly at work, when he was sure people were feeling contempt toward him. He became so upset at those times he could barely do his work: he wanted to go away and hide from those who could see how utterly incompetent he was. If people were nice to him, he suspected that it was out of pity. Using the technique he had learned from his wife, however, of attending very closely to the affects inside him, he began to be aware that these painful feelings were accompanied by a sort of voice, low and insinuating, not really audible, but present nonetheless. It was 'saying,' "You're nothing. You're just nothing!" He knew, this time, the problem he was having was not with his father any longer, but perhaps with the kind of self-depreciation his father had had to struggle with.

Father and son were Jewish, so the patient wondered if it was an internalized anti-Semitism that the father could only handle by thoughtlessly running down others and never even recognized as an attitude he was carrying. That seemed close, but the patient realized that the voice wasn't saying "You're Jewish!" in a damning way. It was saying, "You're nothing!" If he hadn't been Jewish, it would have used something else to level him to unimportance. He found that by paying attention to the feeling of unimportance, he could always tell when the voice was active. It was his demonic personality, no one else's, and his integrity lay in being willing to own it.

At the same time, he had to admit his utter vulnerability when the voice was speaking, noting the same agitated, anguished vibrations that had made his wife so miserable when she was the only one picking them up. In this way, he began to get in touch with his anima for the first time. Up to then, he had thought that you just had to endure certain unpleasant states of mind that didn't seem to go away, and you did so by distracting yourself as much as possible with work. That way, you always got what needed to be done finished, and you could have at least that measure of accomplishment, even if you were miserable much of the time.

The patient could reason that way in part because introverted sensation was his dominant, heroic function and he could use it as a stoic defense. But his heroism went beyond stoicism: it lay in an ability to give himself to any task that he was assigned. The person who carries introverted sensation as his dominant ego function can generally understand how any process works and by attending to very small details can verify whether the correct procedures are being followed by those charged with getting work done using that process. Being good at verifying that things are matching up with what should be happening during each present increment of time as the job advances makes a man with this dominant function a good manager, in the sense of keeping accurate work flowing within budget, but his inferior extraverted intuition may often fail to deliver the larger picture to him of where things overall are going.

Now, he was beginning to see what his extraverted intuitive wife had long known. Nothing good could come of this way of operating, dissociating from his feelings and simply soldiering on, over time. As long as the voice was still free to come whenever it wanted, he continued to be undermined from within. The patient decided to return to therapy.

8. *finally: realize the architypal assessment* In therapy, the patient was advised to establish a relationship to the voice by imagining that it was a real voice and then having a discussion with it. Their dialogues would take the form of him saying, "I can't really accept your effect on me. What good will it do either of us to have you telling me I'm nothing?" The answer came back, "You just are, that's it. You're a Jew and you will go to hell, so what's the point of talking to you now. You aren't going to amount to anything." The patient came to realize that the voice belonged to a part of himself he had virtually avoided his whole life, his introverted intuition, which made these global, archetypal assessments, to

which there was no right of appeal. So he asked the voice to tell him its story, and it turned out that the soft-spoken voice belonged to a Christian man who had violated the tenets of his faith by frequenting massage parlors where women offered him sexual favors. He was sure that God, no matter how merciful, would never forgive him, even if his wife could. The patient responded by saying, “What you’ve done may be far from ideal, but I don’t think you’re going to burn in Hell for it. You need to get a grip: it’s too hard for you always to carry such a load of guilt.” As this psychological work progressed, the patient’s bouts of feeling that he was nothing began to decrease. Instead, he had come to appreciate what such a feeling might be made of, a reaction to self-betrayal. With the example of the broken Christian very much in his mind, he began to become aware of ways in which he was betraying himself at work by failing to assert his own values. For the first time in a very long time, he took a look at the big picture of his career, rather than the individual challenges, and saw that it no longer had the meaning and rightness for him that it once had. He made a career change into a kind of work that freshly expressed his values and gave him an opportunity to contribute more meaningfully. In this way, the introverted intuitive demon that had plagued him became a daimon, guiding him to a higher level of integration within his own ethical perspective. At the heart of all this was a vivid felt sense of his integrity as something that must not be compromised.

1.4.10 The anima: from roles to Self (This section is not trimmed)

1. *definition* The place of a man’s integrity, as I have been hinting throughout this chapter, is the anima. (Anima is Latin for ‘soul.’) Here the man can be taken beyond his usual set of masculine roles. When asked by men to define the anima, the British Jungian analyst Michael Fordham (personal communication, 1979) used to say, “It’s the woman you are.” When he first said it to me, I was amused, but not convinced. But as I have mulled over dreams of men who have found the anima, his statement has made more and more sense to me.
2. *patient example: “old lady”* One such dream was related to me by a young man who had come to see me a couple of years after finishing college. He was working out his acceptance of his homosexuality and starting to ‘come out.’ This patient had a persona indistinguishable from many young heterosexual men of his age, and he liked to present himself as a hipster. He allowed people close to him, including me, to believe that he had used drugs frequently. That was certainly plausible: at that time and place, the early 1970s in Northern California, antiestablishment, middle class youths with good educations were testing the boundaries of their upbringings. In the second year of his therapy with me, he dreamed that he met ‘his old lady,’ which in hip parlance meant a romantic partner close to him in age. In the dream they were living together, and he came home to her. She had an unpretentious, real face that he found wonderful. He kept saying how good she looked to him—not because she was beautiful (she wasn’t) but because she was so real.

Coming upon his ‘old lady’ this way, ‘at home,’ and really liking her just as she was was an amazing experience for this young man. He did not use the word, but I realized that she was his anima. Being comfortable with her meant that he was at home with himself.

It was around this time that he made the great confession of his analysis, which was that the persona of drug aficionado that he had so carefully cultivated, even to the extent of making me believe that he had been ‘using’ up to the time he began working with me, was essentially a sham. He had in fact not gone very far with drugs at all. Shortly after making this confession, he had another dream: a James Bond figure was seen departing from his psychic landscape, off on another adventure with other people, never to return. “I wonder what he’ll do next,” was the last thought of my patient as he watched him depart. I knew I too was witnessing the departure of a false self.

It seemed clear to us both that locating his ‘old lady,’ the anima figure that represented his reality, had exploded the

hipster pretensions of the fictitious persona he had been hiding behind to make himself more glamorous. Not long after these dreams, my patient began to engage seriously and no longer theoretically with his homosexuality and to talk about how he wanted to live that. He had a dream that his and another man's bodies fitted perfectly together, and it was clear to him that if he found the suitable partner he would be entirely comfortable in a homosexual partnership. Not long after this was clear, he felt ready to terminate. He had a final dream in which he suffered an injury, called for a medic, and got his wound healed. A follow-up contact nearly 15 years later revealed that shortly after terminating with me, he entered into a long-term love relationship with a man that had lasted over a decade, followed by a break up, and now, he told me, he was in another long-term relationship with a man that seemed destined to last even longer. He was clearly comfortable with his life.

3. *anima's place in a man* The anima, then, is a place in the psyche where a man can transcend his propensity to play roles, including the various archetypal roles we have been exploring in this chapter. When the anima is reached, rigid roles begin to give way to a deeper connection with oneself that is beyond role. Jungian psychology has classically described the anima as the mediatrix to the Self, and as a personification of the ego-Self axis. (See the Frontispiece to Edinger, 1973 for an illustration of this idea.) Another way to say this is that the anima is the place in a man's psyche where the dream of integrity of personality can become a reality. The plumb line of personhood that develops between superior function hero and inferior function anima establishes the spine of personality, making "integrity in depth" possible (Beebe 1992, pp. 106–107).

When this happens, a personality can bloom, and the personal self will acquire more affective coloration, cohesion, and temporal stability than before.⁴ If it doesn't happen, the anima will be like a flower that hasn't opened. Occasionally a dream will show just this image. Jung calls the anima the "archetype of life" because she gives a man the feeling that he is alive. Hill (1998) points out that the anima is different from the ego in many ways, starting, in a man, with the gender difference. Then there is the fact that she is associated with the inferior function of a man's typology and is thus often clumsy where the heroic function would be smooth. Hill feels she should be regarded as the archetype of otherness. Hillman (1985) in his exhaustive survey of the ways in which Jung conceptualized the "personified notion" of the anima, concurs, and suggests that the purpose of having a part of the mind that is so different from the ego is that, as a soul, it serves the instinct for reflection, our ability to consider our lives from another standpoint (Hillman, 1985, pp. 85–87).

4. *Red Book and Jung's comments* In his Red Book, begun in the midst of a midlife crisis that he compared to primitive "soul loss," Jung (2009) seems to agree. There, he makes it clear that he must connect with his soul and even enter a kind of dialogue with her to be able to reflect adequately on how, in the course of making a name for himself in the world ("the spirit of this time") he managed to lose touch with "the spirit of the depths" (Jung, 2009, p. 229). Before the book is through he will even have apologized to his soul for having abandoned her while pursuing a dazzling persona.

Jung recommends getting to know one's anima as well as possible. That is his therapy for the numerous anima problems to which men, particularly, are prey: bad moods, resentments, obsessive longings for attachment, uncontrolled emotional outbursts. All of these, he says, are symptoms of "faulty adaptation to the inner world" (Jung, 1966, ¶319). Since the anima is concerned with how the man is relating to his deeper psyche, she will call attention to problems by sending symptoms from dread and depression to obsession and depersonalization. Through these manifestations, the anima moves the ego to acknowledge the reality of the psyche. These symptoms tend to moderate when the anima is recognized as the bridge to the unknowable self, which the man must learn to respect.

At any stage of a man's life, finding the anima can be a great boon to his subsequent development. The feminine archetype opens up a man to the notion of individuation beyond conventional roles. Once secure in the anima, a man can begin

to appreciate what Virginia Woolf described her mind to be like—living from a place where the different roles that the archetypes provide are not so much ends in themselves, as fragments of a greater wholeness. Then the real thing becomes simply to stay with oneself in an ongoing, related way, drawing upon all of the archetypes that can make this possible, but without being trapped in any of them.

1.5 (§5) The wizard of Oz: a vision of development in the American political psyche

1.6 (§6) The stretch of individual typologies in the formation of cultural attitudes

2 (§2) Type and the MBTI

2.1 Evolving the Eight-function Model

2.1.1 Historical Background: Jung's Eight Functions

- It was C. G. Jung, of course, who introduced the language we use today: words such as function and attitude, as well as his highly specific names for the four functions of our conscious orientation (thinking, feeling, sensation, intuition), and the two attitudes through which those orientations are deployed (introversion and extraversion).
- Nevertheless, for Jung the attitude type was the primary thing, and the function type a kind of sub-something that expressed that attitude in a particular way.
- Jung started with extraverted thinking and extraverted feeling (which he called 'the extraverted rational types') and extraverted sensation and extraverted intuition ('the extraverted irrational types'), before turning to the introverted types: introverted thinking and introverted feeling ('introverted rational types'), and introverted sensation and introverted intuition ('introverted irrational types'). These were the eight psychological types in Jung's original description.
- It was Jung who taught us that most people pair a rational function with an irrational one to develop a conscious orientation, or, as he put it, an ego-consciousness, that for most people involves just these two differentiated functions.
- Despite Isabel Briggs Myers's later reading of a single sentence in Jung's long and often contradictory book, he never made clear that the attitude type of the two functions in this two-function model of consciousness would alternate between function #1 and function #2.
- Jung did, however, open the door to the possibility of a further differentiation of functions, up to a limiting number of four: the fourth to differentiate being his famous 'inferior' function, which remains too close to the unconscious, and thus a source of errors and complexes.
- Jung said relatively little about the third function. He expected that both functions #3 and #4 would, in most people, remain potentials only, residing in the unconscious, represented in dreams in archaic ways and relatively refractory to development except under exceptional circumstances—such as the individuation process Jung sometimes witnessed in the analysis of a relatively mature person in the second half of life, when the archaic functions would press for integration into consciousness.

2.1.2 Anima/Animus: Bridge to the Unconscious

- Von Franz made it clear that we have a choice about developing function #3, but that the integration of function #4, the inferior function, is very much under the control of the unconscious, which limits what we can do with it. Nevertheless,

图 3: Archetypal complexes carrying the eight functions of consciousness. ✓ Verified

this much of the unconscious belongs in a sense to the ego—and even provides the bridge to the Self that the other differentiated functions cannot.

- I became aware that the inferior function was often thought by Jungian analysts to operate in this way because it is 'carried' by the anima or animus, archetypes of soul that can serve as tutelary figures, representing the otherness of the unconscious psyche, and also its capacity to speak to us to enlarge our conscious perspectives. The anima and animus are like fairy bridges to the unconscious, allowing, almost magically, a relationship to develop between the two parts of the mind, conscious and unconscious, with the potential to replace this tension of opposites with the harmony of wholeness. And it is through the undifferentiated, incorrigible inferior function that they do their best work!

2.1.3 Basic Orientation: hero/heroine, father/mother, puer/puella

- In this way, I began to evolve my understanding that the four functions are brought into consciousness through the dynamic energy of particular archetypes:
 - Hero for the superior function
 - Father for the second or 'auxiliary' function
 - Puer for the tertiary function
 - Anima for the inferior function.

2.1.4 The shadow personality: opposing personality, senex/witch, trickster, demonic personality

- The four archetypes of shadow—opposing personality, senex/witch, trickster and demonic/daimonic personality—and the function-attitudes they carried for me—introverted intuition, extraverted thinking, introverted feeling, extraverted sensation—were all what a psychologist would call ego-dystonic. That is, they were incompatible with my conscious ego or sense of 'I-ness'—what I normally own as part of 'me' and 'my' values. Nevertheless, they were part of my total functioning as a person, uncomfortable as it made me to recognize the fact.
- The archetypal roles within this scheme are shown in Figure 3. The relationships between these archetypes and the scheme of differentiation that results for the function-attitudes is not merely personal to me, but is actually universal.

2.2 Type and Archetype: The spine and its shadow

- The eight-function, eight-archetype model of psychological types is based on two observations that are fundamental to its understanding and application. The first observation is that, in the course of our lives, we each actually make use of all the function-attitudes, those eight options of consciousness that Jung originally described in *Psychological Types*: introverted thinking, introverted feeling, introverted sensation, introverted intuition, extraverted thinking, extraverted feeling, extraverted sensation, and extraverted intuition.
- The second observation is that these function-attitudes, though having typical characteristics that has of type research a century repeatedly verified, are not expressed in the same way by every individual who deploys them. There is a normal variation, not only in the strength and reliability of the functions, according to the degree of preference and practice that the individual will bring to the expression of each type of consciousness, but also in the role the individual enters when expressing a particular consciousness.
- In this chapter I will be concentrating on the pair of archetypes associated with the superior and inferior functions in Figure 8.1 (similar to Figure 3, which define an axis (the vertical line in the diagram) that I call the spine of personality, and adding to them two archetypes (not shown in Figure 8.1) of the function positions that form the normally invisible shadow to this spine. (Archetypes associated with the auxiliary and tertiary functions, which form the arms of the diagram, with their shadows, will be discussed in Chapter 9.)
- The function positions I am concentrating on here (the superior and inferior functions and their opposite-attitude shadows), together with their associated archetypes, form the core of any personality, which structures how the person's consciousness is most characteristically used, for better and worse.
- Before we can explore the archetypal characteristics of this core axis of the shadow, and of the spine of greater integrity that it shadows, we have to get better acquainted with how an archetype, a figure of the unconscious, can be associated with a function of consciousness, which seems to many people like a paradox. Let me trace my own history of developing this idea.
- For a man, it was said, the inferior function was carried by the anima, the internal feminine figure that represents the instinct for soulful connection and reflection (Hillman, 1985). In a woman, the inferior function was said to be carried by the animus, the internal, masculine psychic figure that represents spirited standards (Jung, E., 1931/1957).
- From these studies, I have found four positions of consciousness to be at the core of the individual self: (1) the superior function, (2) the inferior function, (3) the shadow of the superior function, and (4) the shadow of the inferior function.
- The superior function, not surprisingly, is the part of the ego we are most ready to claim ownership of, because it is associated with a sense of competence and potential mastery. The archetype that grants us this confidence in relation to the superior function (around which it is possible to develop a superiority complex) I have named the hero in a man and the heroine in a woman. This is a part of the psyche that welcomes facing challenges, that takes pleasure in recalling its past successful exploits, that revels in its unflagging reliability.
- The differentiation of the hero/heroine is usually the work of childhood, and the more the original family recognizes and values the superior function, the more the child is seen (at least in this area) as remarkable, competent, and gifted.
- The inferior function, in contrast, is a perpetual source of shame or embarrassment for most people. Acknowledging and accepting this shame with a measure of humility is a first, necessary step towards knowing oneself, finding integrity, and beginning to make a meaningful connection to the unconscious (Beebe, 1992).

- But because the inferior function is usually so poorly developed, especially in a young person, to be forced to use it can be an agony, and even calls forth a yelp of complaint, a cry that is often high-pitched in a man, full-throated in a woman. This sonic quality gives us a glimpse into the contra-sexual nature of the archetype carrying the inferior function: the defensive, hysterical, helpless, irritated, bird-like whining in a man is the voice of the anima under pressure, while in a woman the growl of an animal cornered, embittered and at the end of its rope, can emerge from the pressed animus.
- Despite its burden of shame, the inferior function, with its connection to soul or spirit, is also a place of great idealism in the psyche. The higher cause or mission that seizes our energy is often associated with this area of the psyche where we are ourselves rather weak and inept.
- Thus, a person whose superior function is introverted thinking will often put a very high value on the goal of everyone in a group getting along together, although this person may lack any of the feeling skills to facilitate such an outcome. Conversely, an introverted feeling type may be drawn to champion the most abstruse strains of philosophy, even as he or she has to struggle to follow the more intricate twists of thinking.
- The person who cares most passionately about the quality and safety of food may have superior introverted intuition and thus inferior extraverted sensation, while the person with superior introverted sensation may be the most concerned to maintain the quality of the future, for instance by acting now to reduce global warming, an extraverted intuitive precaution.
- In Jungian psychology, anima and animus development are seen as the work of the second half of life, when the inferior function that is associated with anima and animus will start to appear in a much more creative and adapted way.
- When there is development of both the superior and the inferior functions, we can speak of a 'spine' of consciousness that gives a personality backbone.
- Thus Freud named the normal attachment that little boys have for their mothers the 'Oedipus' complex, and the normal interest we all have in our own self-image, 'Narcissism.' But Oedipus actually slept with (and even married) his mother, and had to blind himself for the transgression of looking at her naked. And Narcissus fell in love with his image in a river and drowned trying to kiss it.
- Such archetypal names for normal processes of development seem to me misnomers that undermine our sense of the necessity of such processes for normal development. In fact, they slowed down psychology's sense of the role of attraction to the parent of the opposite sex in the course of developing a well-functioning sexuality, as well as the role of self-esteem in enabling any personality to flower. For generations, analysts warned their patients off interest in their parents and in themselves as signs of psychopathology, when they were not. This was the shadow that qualified the enormous therapeutic possibilities of the new discipline of psychoanalysis.
- The opposing personality is a primary resource of defense, a part of us that tends to lurch forward first when we feel our heroic superior function and its most cherished values to be under attack.
- I often use the term demonic/daimonic personality to convey that the archetype associated with the most unconscious of regions of the mind can deliver insights that are of the highest value, as well as depreciating and undermining ones. It is truly an area of ourselves that is both devil and angel.
- The demonic personality is usually the locus of our most unyielding and unconscious flaws of character. When we act beastly, it is often through this archetype and its associated function-attitude.

- Beast is the demonic/daimonic personality, which in life, unlike the Beast at the end of most versions of the fairy tale, does not transform into a handsome prince. This most incorrigible of our function-attitudes stays a beast, but one that to some extent can be tamed through the anima's solicitous and energetic care.
- Although we commonly feel excruciatingly self-conscious about the inferior function (the anima and animus can amplify that self-consciousness to the point of projecting that everyone is noticing our clumsiness in this area), it is important to realize that most of us are quite unconscious of the impact on other people of the functions carried by the opposing or demonic personality.
- These less-inhibited parts of our functioning are among those that others experience negatively. They form the realistic basis of the 'unfair' judgments we sometimes experience ourselves receiving from others. It would be wiser for someone receiving such a judgment to say to him or herself, 'That person has seen my shadow.'

2.3 Type and Archetype: The arms and their shadow

- Becoming conscious of this axis between the superior and inferior functions allows someone to know who he or she is and makes it easier for the person to hold to that identity with integrity in dealings with others.
- When we turn to the auxiliary and tertiary functions, we find that they too define an axis, which is often diagrammed as a cross bar to the vertical spine. I refer to what is represented by this crossbar as the 'arms' of the personality. Functions creating this horizontal axis are concerned less with issues of identity than with ways of caring and being cared for by others.
- Not all the qualities of the experience of consciousness in each new place can be accounted for by the nature of the function attitude in that place, because extraverted feeling in the superior (first) place feels different from extraverted feeling in the auxiliary (second) place, and extraverted feeling in the tertiary (third) place feels like something else again. The additional factor responsible for the felt qualitative shift is the archetype in that place. The archetype turns the place into a role we may take up in life.
- The function-attitude occupying the auxiliary position is strongly developed in most adults, like the right arm of a right-handed person, which has long been used to do things to help and support others. The auxiliary function is parental; it takes the lead in fostering the development of other people, and it often serves as their role model. The tertiary function, by contrast, is more like the left hand of a right-handed person, sometimes original and creative, but always a bit unstable and at times even weaker in its reliability than the inferior function. Even when the tertiary function shows flair in what it does, it tends to be acutely aware of its need for the stabilizing influence of another person; this portion of our consciousness is thus more associated with vulnerability than with competence.
- The auxiliary function is not so good at taking care of the third function in oneself, but it operates like a good parent to everyone else, offering its strength as protection to the more vulnerable parts of others. This is particularly attractive to the tertiary function in another person, which is like an eternal child, who needs the admiration, approval, strength and guidance of at least one other person to be able to operate well. The auxiliary function parent and the tertiary function child are complements, not just within the psyche, where they share a common axis of personality, but between people. Within the individual psyche they operate like the arms of consciousness because they are used, more or less consciously, to support and be supported by others, and thus define the ways in which we use our consciousnesses to reach out to others. They provide a kind of balance to the spine of consciousness (superior and inferior function), which in defining our identity concerns itself more with what we can be or do in and for ourselves.

- The two axes, the spine and the arms, can be considered, respectively, the axis of our relation to self, and the axis of our relations to others. Note also that the two axes are complementary in that one is always rational ('judging' in the Myers-Briggs terminology), while the other is irrational ('perceiving'). For example, we can use the arms either to calm us down and be more reasonable in our dealings with others when we are too much in our irrational spine, or to buoy us beyond the rigidity of the spine when it is rational.
- As we move beyond the heroic first function, however, we should recognize that not all of the eight functions follow hero psychology in being measurable by their degree of strength. They do not, in actual experience, follow a descending hierarchy of differentiation from first (superior) through fourth (inferior) to eighth. Rather, the strength, and the kind of strength, a function of consciousness displays is a consequence of the archetypal role associated with it, and archetypes are differently developed in different people. The numbering of the positions is a bit of an anachronism, left over from the early days of Jungian psychology and of Isabel Briggs Myers's adaptation of that psychology to the analysis of the MBTI findings.
- The four function-attitude positions (the auxiliary and tertiary functions and their attitudinally opposed shadows) organize the way any personality reaches beyond itself to others. The archetypes in these positions structure the person's orientation to one of the most basic activities involving human consciousness, the support and care of others. Some people define their whole lives according to these parameters. They have little curiosity as to who they are, and relatively few goals for themselves, but they are greatly concerned about how they treat others and are treated by them. Such people live more on the horizontal line of Figure 9.1 than on the vertical line. Their consciousness is more organized around what their arms are doing than around what their spine is like. Working with such people, it is often easier to type the way they would ideally like to take care of another person than it is to get them to say what they want for themselves.
- Others of us, even if we are fairly clear about the nature of our spines, still live a great deal out of our horizontal axis.
- Although I am sometimes tempted to use my extraverted intuition to show people where I see the possibilities they haven't thought of, I have learned that people are not usually seeking that kind of help from me either. It's my parental second function I must use when taking care of others, not my heroic first function, and that means I take the best care of people not when I heroically show them a possibility they haven't thought of, but when I help them to define more sharply what they already know.
- The senex is an archetype that shadows the good father that I consciously aspire to be when I try to help people. Senex is the Latin word for 'old man' and the root word for 'senator,' and it takes on the quality of everything that has stood the test of time and now resists change.
- Thinking is senex when it is dogmatic and no longer heedful of the need in life for fresh starts and new developments. Then one insists with a client on the tried and true, and argues against any move to change the status quo. This is not the way I parent, but it is the way I sometimes stultify.
- This rather everyday example from the life of a working analyst shows how an auxiliary function can easily be replaced by the same function deployed with the opposite attitude. Then, the archetypal quality of the parenting has shifted.
- The auxiliary function can be used to encourage and enable others—to strengthen and support them in their path—but its shadow, the senex function, does just the opposite: it discourages and disables them; it freezes them in their tracks and makes them doubt the prudence of everything they are doing. This may sound indeed like a very unpleasant archetypal role to fall into—and it often is—but it is sometimes a necessary one. When we are confronted, for example, with a

person or plan whose basic direction strikes us as fundamentally destructive and dangerous to the things we value, one effective option can be for us to pull rank and set limits, just as we might if confronted with a misbehaving child. In this sense, the senex archetype or role can also be thought of as the role of the negative or disapproving father, just as the female equivalent, the witch, can be envisioned as a critical mother who seems impossible to please.

- Where the person with auxiliary extraverted sensation carried by a mother archetype might, for example, take care of others by cooking for them, the person with extraverted sensation in the witch position might be tempted to express displeasure by banging loudly on the wall of an apartment when the neighbor's party, on the other side of the wall, is too loud, or by slapping an impudent child. Auxiliary, fatherly introverted sensation might show itself through teaching a son the series of simple steps necessary to knot a tie; senex introverted sensation, on the other hand, might point out the clumsiness of the son's hand movements. Senex or witch introverted feeling can take the form of a cold silence that implies that something someone has just said or done is in such bad taste that the person doing it deserves an unspoken excommunication.
- The child who experiences the disapproving parent can remain a part of us even as we grow into adulthood, and is the common basis of a traumatic neurosis that I have come to feel we probably all carry in the area of the third function.
- This ability to oscillate between states of abject empty-headedness and over-the-top inventiveness is typical of tertiary function introverted thinking, and gives a sense of the cycles of deflation and inflation all third functions go through.
- I have spoken of this inflation/deflation cycling of the third function as the 'third-function crisis,' because it surfaces in the lives of people who have begun to develop their typology to the point of trying to make the third function work for them and discovered its strange up and down quality. Often the third function operates as if in a double bind, as Monroe's telling metaphor conveys. Double binds are what people are put in by the trickster archetype so long as it remains unconscious, in which case one is vulnerable to being taken advantage of by others. It is an enormous step in type development when we are able to make the trickster conscious and put the person who is trying to take advantage of us in a double bind.
- An extraverted feeling parent with auxiliary introverted sensation may use trickster introverted intuition to imply damage to the archetypal order of things when an adolescent child threatens to make a choice that the parent does not approve of.
- A question that often arises when we discover examples of type interactions in which shadow functions are deployed is: How does the person know to use these functions? Does the situation require that we use a particular function, which we then supply even if it is normally relatively unconscious for us? Or is it a particular archetypal role that is called for, entering into which brings us to use whatever function-attitude is associated with it? The answer, I think, is both. Effective living requires, sooner or later, that we use all our function-attitudes. When it comes to responding to the needs of others and to allowing others to meet our needs, in both personal and professional situations, we need to be in touch with the parent and the child in ourselves, and with the trickster and the senex or witch as well. Otherwise, these same archetypes will come up, but we will be far less conscious in how we deploy them.

3 History of type

3.1 Psychological Types: An historical overview

- It has not always been clear to students of Jung's analytical psychology what his famous 'types' are types of. The commonest assumption has been that they refer to types of people. But for Jung, they were types of consciousness, that is, characteristic orientations assumed by the ego in establishing and discriminating an individual's inner and outer reality.
- He had already recognized that consciousness is not expressed uniformly in the same way in every person. Rather, Jung conceptualized consciousness as centered in an ego that expressed its ability to orient the psyche through different basic attitudes and functions.
- By the time he came to write *Psychological Types* in 1919 and 1920, he had already envisioned a sophisticated system of analysis of types of consciousness as mental process characterized by four main dichotomies: extraversion-introversion, thinking-feeling, sensation-intuition, and rational-irrational. It was this system that he continued to defend for the rest of his life and that has informed all subsequent work on Jung's psychological types.

3.1.1 Definitions

- In *Psychological Types*, Jung understands there to be four functions of consciousness, which he names sensation, thinking, feeling, and intuition. These terms did not originate with Jung; rather, they were culled from the history of psychology, and they carry the ghost of earlier meanings placed on them by many physicians and philosophers.
- One of these faculties had been willing, which became for Schopenhauer the essential attribute of the unconscious mind. Freud and Adler would develop this theme in their theories of wishing and overcompensation. Their idea of the ego was an agency that needed to defend itself against knowing too much about the willing of the unconscious mind, and whose faculties could therefore best be described as defenses, even if those defenses enabled the psyche to pursue its true aims in disguise, as it were.
- Jung, consistent with his greater emphasis on the possibilities of consciousness, accepted the will as part of the ego, and concentrated on the functions the ego needs to orient itself to any reality with which it must cope. To understand reality, he reasoned, we need a function of consciousness that registers reality as real: this he called the sensation function, which delivers to us the sensation that something is. Then, he said, we need a function to define for us what we are perceiving when we notice that something is there: this he called the thinking function. Next, he understood that we need a function that assigns a value to the thing that we have perceived and named; this is called the function of feeling. Finally, he realized that we require a function to enable us to divine the imp or possibilities of the thing that has been empirically perceived, logically defined and discriminatingly evaluated: this he called the intuitive function.
- Jung held that feeling and thinking are rational functions, and that sensation and intuition are irrational functions.
- Rather, Jung made clear that he took the process of assigning feeling value to be an ego-function that was just as rational in its operation as the process of defining and creating logical links (thinking).
- Jung also recognized that sensation, even though it is the evidential basis for our empirical reality testing, is as irrational a process as the intuitive one that delivers our 'hunches' to us. As a moment's reflection will demonstrate, we do not rationally choose what we manage to see, hear, smell, taste or grasp with our sense of touch.

- Rather, in *Psychological Types*, he convincingly makes the case that consciousness is for all of us the product of both rational and irrational processes of encountering and assessing reality.
- The extravert is distinguished by his craving for the object, by his empathy and identification with the object, his voluntary dependence on the object. He is influenced by the object in the same degree as he strives to assimilate it. – Jung, 1921/1971, ¶535
- The introvert is distinguished by his self-assertion vis à vis the object. He struggles against any dependency on the object, he repels all its influences, and even fears it. So much the more is he dependent on the idea, which shields him from external reality and gives him the feeling of inner freedom – though he pays for this with a very noticeable power psychology. – Jung, 1921/1971, ¶535
- Elsewhere in the book *Psychological Types* he implies that we all use both processes, that there is an extravert and an introvert in each of us. How this can be finally becomes clear when he uses the now famous terms not as nouns but as adjectives, to define the way in which the various functions of consciousness happen to be deployed in a particular individual. In turn, he takes up the description of extraverted thinking, extraverted feeling, extraverted sensation, extraverted intuition, introverted thinking, introverted feeling, introverted sensation and introverted intuition, noting that these “basic psychological functions seldom or never have the same strength or degree of development in the same individual” and that as “a rule, one or the other function predominates, in both strength and development” (Jung, 1921/1971, ¶584).
- An introverted function, therefore, is one that has turned away from the object and toward the archetypal ‘idea’ that the object might be most closely matched to. This archetypal idea, residing in the inner world, can be understood as a profound thought, a value, a metaphorical image, or a model of reality, depending upon whether the introverted function is thinking, feeling, intuition or sensation. When an introverted function is used to orient to something external, it is in the end the comparison to the archetype, not the stimulating object or situation itself, that finally commands the attention of the function. This can seem like a withdrawal from the object.
- Introverted sensation, as a process, is thus “guided by the intensity of the subjective sensation excited by the objective stimulus”. That means that the person strongly identified with the use of this function will react immediately to the internal, bodily sensations caused by, for example, the food served at a meal, so that the distension of his stomach, or the degree of pepper in the meal, even the audibility of others at his table, may turn out to be more determinative of his happiness at a dinner party than the carefully assembled company that the host or hostess has arranged for the gathering. This is because a dissonance with the archetype of the good meal has been constellated by the excessive stimulation.
- Those who make abundant use of an introverted function – introverted intuition, say, or introverted feeling – can nevertheless be perceived by others as depreciating the object.
- The object, when this function is being used, is being avoided because the person using this function is “building up his world of ideas, and never shrinks from thinking a thought because it might prove to be dangerous, subversive, heretical, or wounding to other people’s feelings”. The ideas introverted thinking dwells on are archetypal ideas.
- These ‘new’ thoughts, however, take effort to explain and the introverted thinking function frequently goes on refining its conceptions when the patience of others has been exhausted: it does not know when to stop.
- Introverted intuition, as a function, is concerned with “the background process of consciousness”, and for the person using that function in a differentiated way, “unconscious images acquire the dignity of things”. This is the one type of

consciousness that naturally “apprehends the images arising from the a priori inherited foundations of the unconscious”. That is, rather than thinking about, experimentally comparing, or feeling the archetype that arises in relation to a situation, the introverted intuitive function becomes directly aware of the archetype as an image, as if ‘seeing’ it: introverted intuition is therefore the function responsible for visionary experience, which often seems ‘mystical’ to others.

- Introverted feeling, by contrast, can only feel the archetypal image of a situation. It cannot see it.
- It is important to realize that, when the introverted feeling function is, for example, feeling ‘bad,’ it is feeling that the entire archetypal category of ‘bad’ and it is not likely to quit until that archetypal badness is felt through. As Jung says,

The depth of this feeling can only be guessed – it can never be clearly grasped. It makes people silent and difficult of access; it shrinks back like a violet from the brute nature of the object in order to fill the depths of the subject. It comes out with negative judgments or assumes an air of profound indifference as a means of defense.

- The important thing to grasp, in understanding introverted feeling, is that archetypes can be felt every bit as much as they can be thought about, directly intuited, or experienced somatically.
- The extraverted functions, as Jung has already been quoted as informing us, tend so completely to merge with the object as to identify with it. They often end up without adequate distance from the stimuli that are presented to them.
- In the case of extraverted feeling, these are the feelings – that is, the emotions and prejudices – of others, and often of society at large, so that the personality of a person strongly identified with this function “appears adjusted in relation to external conditions. Her feelings harmonize with objective situations and general values.”
- On the other hand, no type is more capable of appreciation and sympathy.
- Similarly, extraverted thinking tends to become enamored of established ideas, frequently neglecting the duty to think freshly about what is being expressed and the language that is really appropriate to it. There is no brake, therefore, against insisting that these ideas should govern everyone’s behavior. As Jung puts it, the person strongly identified with this function “elevates ... an objectively oriented intellectual formula ... into the ruling principle not only for himself but for his whole environment.”
- Extraverted sensation, as a cognitive process, seeks “an accumulation of actual experiences of concrete objects” and the function can become, in the moment, so riveted on the reality ‘out there’ that it cannot recognize that other things may also be happening at that same time: this is a function perfect for watching a basketball game, but it may not notice that someone is about to say or do something unexpected.
- Extraverted intuition can become so engraved with the possibilities of its objects that, for the person strongly identified with this function, “it is as though his whole life vanished in the new situation”. To use a metaphor to describe what is really an unmediated, instinctive process, this function operates like a traffic signal, indicating with its green light when it is time to proceed to develop something, with its red light when it is time to stop, and with its yellow light when one must proceed with caution. A significant problem is that people without a similar degree of development of extraverted intuition may not perceive the presence of any signal at all and thus cannot understand why the person led by such intuitions is rushing ahead, stopping, or pausing when he does. And extraverted intuition’s failure to heed sensation cues can undermine its claim to have ‘seen’ anything at all.

- Differentiation means the development of differences, the separation of parts from the whole. In this work I employ the concept of differentiation chiefly with respect to the psychological functions. So long as a function is still so fused with one or more other functions – thinking with feeling, feeling with sensation, etc. – that it is unable to operate on its own, it is in an archaic condition, i.e., not differentiated, not separated from the whole as a special part and existing by itself. Undifferentiated thinking is incapable of thinking apart from other functions; it is continually mixed up with sensations, feelings, intuitions, just as undifferentiated feeling is mixed up with sensations and fantasies, as for instance in the sexualization (Freud) of feeling and thinking in a neurosis. – Jung, 1921/1971, ¶705
- As long as a function is undifferentiated, moreover, it cannot be deployed in the conscious manner of a directed mental process that is truly under the control of the ego, and capable of being applied to tasks and goals: “Without differentiation direction is impossible, since the direction of a function towards a goal depends on the elimination of anything irrelevant. Fusion with the irrelevant precludes direction; only a differentiated function is capable of being directed”.
- One way to understand what Jung meant by individuation is the progressive differentiation of the various psychological functions of consciousness. For, as he puts it elsewhere in the Definitions section, “individuation ... is a process of differentiation (q.v.) having for its goal the development of the individual personality.” It is “an extension of the sphere of consciousness, an enriching of conscious psychological life.”
- Jung believed that we all get a head start in individuation through a natural tendency to differentiate at least two function-attitudes out of our total potential complement of eight. The two function-attitudes that most naturally tend to differentiate early in our development of ego-consciousness will not be the same for each individual. Because they develop so early they appear to be innate, although later “falsification of type” as a result of environmental influences can distort the individual’s typological bent. Sixteen psychological type profiles can be distinguished simply on the basis of which of the eight function-attitudes turns out to be the most differentiated – the dominant or ‘superior’ function – and which the next most differentiated – the ‘auxiliary’ function.
- Rather, if with respect to differentiation someone’s first, or superior, function is on the rational axis (i.e. is either thinking or feeling), then that individual’s auxiliary function will have to come from the irrational axis (be either sensation or intuition).
- Isabel Briggs Myers, on the other hand, took Jung’s subsequent statement, that the auxiliary function is “in every respect different from the nature of the primary function,” to mean that the auxiliary must differ from the superior function in attitude.
- It should be noted that Jung took for granted that most consciousnesses are so undifferentiated that even the auxiliary function is rarely more than “relatively unconscious”. Too fine a distinction regarding the attitude of the auxiliary would not have made a great deal of sense to him: everything besides the superior function was still more or less unconscious anyway. He spoke of a shadowy tertiary function, and a fourth, ‘inferior’ function to which he gave a special status, as a source of problematic, touchy reactions because of its especial closeness to the unconscious. This inferior function is “the function that lags behind in the process of differentiation”. Often a source of shame, the inferior function is conceived of as being carried by the anima in a man, and the animus in a women, in contrast to the superior function, which is identified with the persona.
- The inferior function will always be the other pole of the typological axis (whether rational or irrational) on which the superior function falls; so a superior thinking function will be plagued by an inferior feeling function, superior sensation

by inferior intuition, superior intuition by inferior sensation, and superior feeling by inferior thinking. Moreover (and here there is more agreement in the Jungian tradition) if the superior function is introverted, the inferior function will be extraverted; and if the superior is extraverted, the inferior function will be introverted.

- Using Jung's rules for type differentiation and understanding Isabel Briggs Myers' notion of "good type development", it is clear that the differentiation of a strong natural superior and accompanying auxiliary function that is different in every respect is the starting point for further differentiation. The other function-attitudes operate largely out of awareness until and unless they become conscious in the course of development.

3.1.2 Innovations, criticisms and developments

- No one, she argued (and Jung also says this), can simply take up the inferior function directly and develop it. Not only does it tend to "stay low", it cannot even be approached effectively until the first three functions have been differentiated.
- Following the evidence of dreams and also movies in which the auxiliary and tertiary functions are often symbolized as an older and younger person of the same sex as the figure identified with the superior function, I have concluded that the auxiliary function is carried by a sable parental figure (usually a father in a man and a mother in a woman) and the tertiary function by an unstable child figure who is given to cycles of inflation and deflation (puer aeternus in a man, puella aeterna in a woman).
- It is the other four functions that constitute the true shadow of the first four, a shadow accentuated by the process of differentiation that allows the first four to develop and become conscious function-attitudes.
- According to the model of typology I have developed (Chapter 3), specific archetypes carry the shadows of the first four functions: the opposing personality (carrying the shadow of the hero), the senex or witch (shadow of the father or mother), the trickster (shadow of the puer or puella), and the demonic/daimonic personality (shadow of the anima/animus).
- My model implies that development of all eight function-attitudes will involve a significant engagement with each of the archetypal complexes, and a differentiation of each function out of its archetypal manifestation. In integrating one's typology, the issues associated with each archetypal complex must be faced, exactly as in classical individuation, which has been conceived as the progressive integration of the collective unconscious through engagement with a series of archetypal figures.
- As such times the therapist can often help to re-establish ego strength in the patient by speaking the language of the patient's superior function rather than mirroring the typological idiom of the possessing complex.
- In less florid, but nevertheless demanding, borderline and narcissistic conditions, function-attitudes that are in shadow for a client can be associated with archetypal defenses of the self, and it advances therapy to understand their precise character.
- Another significant line of development of the theory of psychological types has been in the area of standardized type assessment instruments.
- It is really the Myers-Briggs Type Indicator (MBTI) developed by Isabel Briggs Myers and her mother Katherine Briggs, who were not Jungian analysts, that put standardized type instruments on the map internationally. The MBTI, developed in earnest from 1942 and finally licensed in the 1960s, has become one of the most popular psychological instruments in the English-speaking world and is starting to be used in translation in other countries.

- All of these paper-and-pencil questionnaires involve forced choices constructed according to Jung's "bipolar assumption" that we cannot think and feel, or take in sensation and use intuition, at the same time. In 1980, Jungian analyst June Singer and Mary Loomis offered their own instrument, the Singer-Loomis Inventory of Personality (SLIP), which does not build on this assumption; instead it assesses the level of development of each of the eight function-attitudes separately.
- Results found that the MBTI and the JTS both indicated extraversion-introversion with substantial agreement, sensing-intuition with moderate agreement, and thinking-feeling with limited agreement. Evidence was equivocal for the instruments' ability to indicate dominant function. It appears that the SLIP measures different constructs than either the MBTI or the JTS, so that little support was found for Singer and Loomis' challenge to Jung's bipolarity assumption. – Karesh, Pieper, & Holland, 1994, p. 30
- Myers also is responsible for the terms 'judging' and 'perceiving' as less loaded synonyms for 'rational' and 'irrational', although the instrument confines its J and P descriptors to the characterization of the leading extraverted function.
- In recent years, a controversy has developed as to whether the third and fourth functions continue the alternation of attitudes (with respect to extraversion or introversion) begun by the first two functions.
- Everyone seems to agree on one point, however: that the fourth or inferior function has the opposite attitude from the first or dominant function.
- There have also been attempts to link the eight Jungian function-attitudes and sixteen MBTI type profiles to a new notion of temperament, Sheldon's body types, the DSM-IV personality disorders, and the 'multiple intelligences' of cognitive psychology. The types have been linked to religious orientation and moral decision-making styles.

3.1.3 Current status and trends

- Type is still a 'hard sell' among many analysts. A study published by Plaut (1972) revealed that less than half of Jungian analysts use type in their clinical work.
- Many of these analysts are unaware that the Association for Psychological Type considers it unethical to type someone simply on the basis of their results on the MBTI, which is after all only an 'indicator.' There must be at least a follow-up interview in which the results of the assessment are explained with a proviso along the lines of, 'this is the type the instrument indicates, and you can see if it really fits you.'
- In psychotherapeutic circles, sadly, few clinicians can even recognize the eight function-attitudes.
- One place type theory has taken limited, but promising, hold in clinical work is in the area of couple therapy and marriage counseling. Therapists who have explained the types to their clients have often reported that the results are very satisfying, in terms of creating appropriate expectations between the partners and helping them to adjust their communication styles.
- Those of us who are interested in this theory need to establish its relevance to cognitive psychology in general, and to what, in a contemporary nod to faculty psychology, has been called "the modularity of mind" (Fodor, 1983).
- That consciousness appears to the psyche as a quaternary of functions, mirrored by an equally quaternary shadow showing the same functions with the opposite attitudes, means that its structure imitates that of the Self, as became clear to the later Jung (1951/1959, ¶398). His typology has therefore turned out to be, not his ego psychology, as so many of us assumed, but his self psychology. In its patterning, typology recognizes many paths that psyche provides for consciousness to travel; in its complexity, typology demonstrates dynamic interactions between the paths that drive consciousness itself forward.

3.2 The Red Book as a work of conscience

3.2.1 Introduction: finding a way in

- In the Red Book, each thought is identified with a particular character – sometimes an historical person, sometimes a fantasy figure. There is no final word that is the word, although there are certainly philosophic crescendos when, for a moment, an igniting truth, at least for Jung, emerges. Yet there are plenty of reminders that one man's truth cannot be every person's truth. In that sense, once you surrender to the book, there is plenty of room for you to breathe in it.

3.2.2 Disentangling from the spirit of the time

- Jung recalled that the vision left him with an almost unbearable anguish comprised of guilt, compassion for the slain hero, and stupefaction at why he should have undertaken such a surprising and underhanded crime. Gradually, he came to understand that the dream reflects a painful process of disidentifying from the archetype of the conquering hero who, however idealistic, operates in the world by imposing his will. – Jung/Jaffe, 1963, pp. 180-181
- As a specialist in schizophrenia, he knew that it was common for fantasies of world catastrophe to appear just prior to the onset of a psychotic break.
- The premonitory visions that Jung experienced and recorded in The Red Book showed him that the mind is an instrument which is capable of registering, in words Gregory Bateson (1972) would later use, “use of a difference”.
- In his later work on typology, he emphasizes the clumsy, disappointing piece in all of us that is the inferior function as the center of the vulnerability that is the gateway to the soul.
- Therefore, the heroic attitude, the heroic ideal of what a man or a nation should be, was a threat to the soul, because it needed to deny incapacity with a can-do attitude.
- Infinitely closer to the chaos of that time than we are now, Jung is groping in The Red Book to discover what it is in himself and other Europeans that is expressing itself through the war, which he senses has more to do with overthrowing the heroic attitude than with living up to it. His insight that this outer calamity reflected an inner complex is one that he codified much later as the psychological rule, “when an inner situation is not made conscious, it happens outside, as fate” (Jung, 1959, ¶126).
- On the other hand, when Jung wrote that we should sacrifice the hero in ourselves (2009, p. 239), a rare call on his part to collective action, I do not believe he meant to we should eschew the part of our personalities that is most competent, reliably rises to challenges, and masters difficult tasks. I believe he meant instead that we should sacrifice the false heroism that would impose our will on ourselves and others. In his own case, he associated the dream figure, Siegfried, with the extraverted thinking function. Speaking of the Siegfried dream in 1925, he said, “I had killed my intellect... I deposed my superior function.” Having decided to “sacrifice” his thinking, he began to conceive of his intuition as his new “superior” function (p. 90).
- “The rain that fell” at the end of the dream, he said, “is a symbol of the release of tension; that is, the forces of the unconscious are loosed.” Jung said, “There is a chance for other sides of the personality to be born into life” (p. 57).
- What was released for Jung was a different sort of heroism, his courageous and resourceful introverted intuition, which was capable of exploring the depths where he could find his soul. This is not quite the same thing as ‘deposing’ his superior function. Rather, it is establishing what I call in Integrity in Depth the “spine of personality” (Beebe, 1992, pp.

106-107). My view is that his thinking was never his true superior function. Rather, his using it as if it were a superior function was “a falsification of type,” a not uncommon consequence of “abnormal external influences”.

3.2.3 The spirit of the depths

- I see a direct line from *The Red Book* to Jung’s achievement in *Psychological Types*. To me the miracle of that book is not just that it recognizes both feeling and thinking as rational functions and accords them equal status, although that was quite a step. What’s most remarkable to me is that Jung includes the irrational functions and makes them of equal value to the rational. That is a leap that would not easily have grown out of his enlightenment education. Through his work on *The Red Book*, Jung accepts the irrational as a source of knowledge. In doing this, I think he is moved not just by a “self that knows what’s good for itself” but also by an ethical instinct that to do anything less is to endorse the spirit of the times that is ruining the world.

3.2.4 The red one

- Nurturing a strong relationship between the ego standpoint and the anima, however, is not something that usually happens all at once. There is a journey involved, a series of adventures along the way. As we enter midlife, it often happens that the emphasis in our type development shifts from the auxiliary function to the third function. We get tired of always using the same two functions of consciousness and want to see another part of our personality blossom. I think this was happening for Jung.
- In teaching about typology, I call the process of discovering and engaging with the third function, of finding its limitations and vulnerability, the third-function crisis. Associated with the archetype of the puer or puella, the inner child or youth, the third function can soar in flights of idealism only, moments later, to panic at its lack of solid foundation and crash, Icarus-like, to earth. Just as the inferior, or fourth, function is opposite from the superior, so the third function is opposite from the auxiliary. So if I am correct that Jung’s over-used auxiliary was extraverted thinking, his third function was introverted feeling.
- Introverted feeling is always a bit reserved, concerned with what is suitable, what’s proper. As the Myers-Briggs Type Indicator people have taught us, it is a judging function. A common symbol of introverted feeling in dreams is the judge, because the function evaluates things, holding them to an archetypal standard of appropriateness. It makes judgements, even if, out of courtesy, it often keeps its findings to itself. It must be held in mind, however, that introverted feeling as a third function is a less reliable judge than when it is one of the two most preferred and developed functions. Like a child, it may show delight or turn up its nose at certain things, but because its experience is limited, its judgement is not necessarily mature.
- The red fellow tells Jung that he saw from far away that Jung was sitting high up on the tower watching for something to happen. It is this disengaged but expectant attitude that has attracted the Red One to him.
- Throughout *The Red Book*, we find Jung working on his feeling problem – perhaps that’s even the reason he chose a red leather to cover the work.
- Reflecting on his encounter with the Red One, Jung writes, “Taking the devil seriously does not mean going over to his side” (p. 261). This is the toughness of work on integrating the shadow. It doesn’t mean capitulating; it means coming to an understanding, thereby to accept your other standpoint.

- Through my coming to terms with the devil, he accepted some of my seriousness and I accepted some of his joy.... It is always a risky thing to accept joy, but it leads us to life and its disappointments, from which the wholeness of our life becomes. – Red Book, p. 261
- The unconscious changes when we engage with it, just as we change if we accept the unconscious figure. Jung shows himself ready to give up some of that puer unrealness, the above-it-all-ness, the untouched-ness. I find this interesting and moving.

3.2.5 Philemon and the dead

- The name ‘Philemon’ comes from the Greek word for ‘kiss,’ so you would expect this character to represent a feeling function capable of a tender, loving attitude toward the feminine.
- When we actually hear Philemon speak in The Red Book however, and look at the picture Jung made of him, it is a surprise to see that he is not a feeling type.
- There is more than a hint of the senex (severe old man) archetype in Philemon, even though it is clear that he is a source of wise introverted thinking for Jung.
- One element that astonished Jung was the fact that the dead appeared to know no more than they had when they died. One would have assumed that, if still around, they would have attained greater knowledge since death. Instead, Jung discovered that the dead are waiting for answers from the living.
- In The Red Book I sense Jung asking, “If my father lost his faith, what is faith? What is Christian faith? Not just my father lost his faith; what about all the church fathers?”
- I would amplify the image of the blue shade in terms of the weakening of the Christian spirit over centuries and specifically link it to the collapsed Christian thinking of Jung’s father, Paul Achilles Jung, now finally welcome within a more inclusive spiritual ecology.

3.3 Psychological types in Freud and Jung

- TODO

4 Applications of type

4.1 Difficulties in the recognition of psychological type

4.2 An archetypal model of the self in dialogue

4.3 Identifying the American shadow: typological reflections on the 1992 Los Angeles riots

参考书目简介

- Book [1] demonstrates the bond between the eight types of consciousness Jung named and the archetypal complexes that impart energy and purpose to our emotions, fantasies, and dreams. It contains four parts: (1) theoretical contributions, including the eight function-attitudes, (2) type and the MBTI, (3) history of type, and (4) applications of type.
- Book [2] 是压力反应圣经 (grip)。
